

Thanks to the synergy between the Delegations, Directorates, Divisions and Units of the Inter-American Institute for Cooperation on Agriculture, we have continued to make progress in identifying donors and mobilizing resources based on concrete proposals for the development of technical cooperation.

**Current statistics**

**Open Calls Dashboard**  
**(1 March - 30 June 2019)**

The Open Calls Dashboard is available on the Intranet at: <http://apps.iica.int/SIPRE/pages/Participantes/Default>

**App to Monitor the Mobilization of External Resources**  
**(1 March - 30 June 2019)**

\* This amount includes all opportunities in the report at various stages of development. In other words, it is a summary of opportunities identified, negotiated, formulated and approved by all the Delegations.

The Opportunity for Mobilizing External Resources App is available on the Intranet at: <http://apps.iina.int/OCR/default>

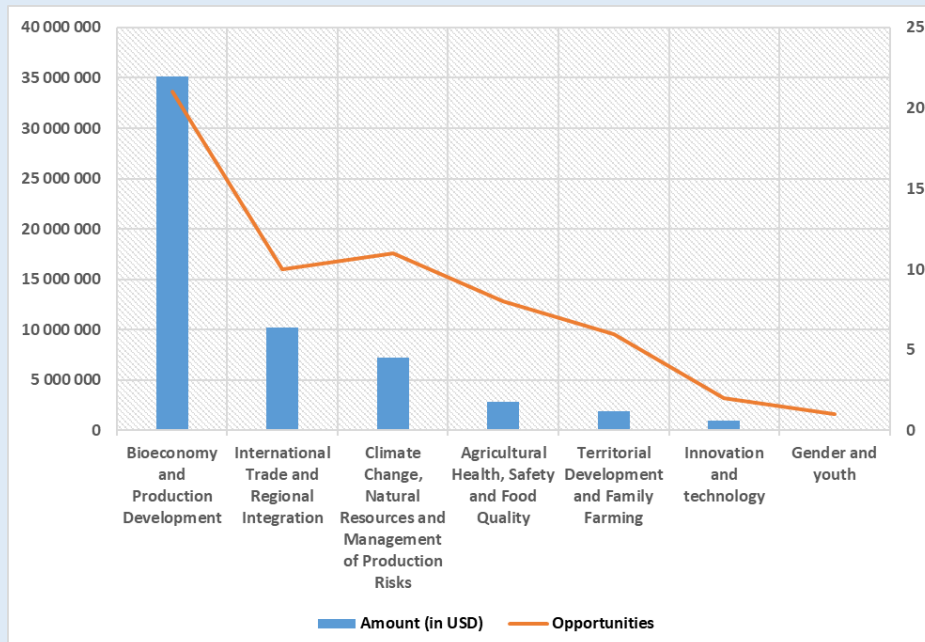

## Mobilization of External Resources (projects approved by counterparts)

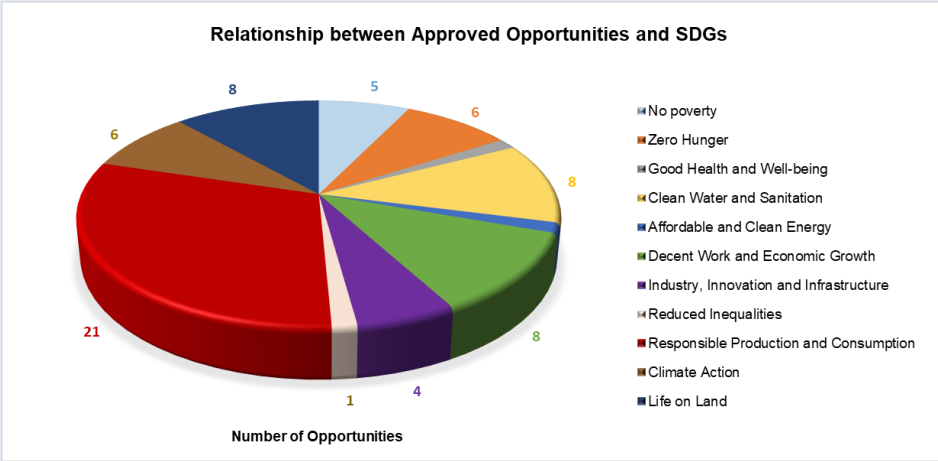

### Relationship to Technical Programs and Cross-cutting Themes

Of the 220 opportunities identified, according to the Mobilizing External Resources App, 59 opportunities were approved by counterparts. These are broken down as follows - by technical program and cross-cutting theme, as well as by Sustainable Development Goal (SDG).

### Relationship between Approved Opportunities, Technical Programs and Cross-cutting Themes

**Support Actions**

**Green Climate Fund**

In May of 2019, IICA became a member of the Communities of Practice (CP), a global network of climate change experts created by the Green Climate Fund (GCF), as a means of capitalizing on the latest climate expertise and increasing the impact of investments for climate action. Participation in this network has enabled the Institute to play a crucial role in driving transformative actions in support of the GCF's mandate.

Moreover, IICA is still in the application process of becoming a GCF-accredited agency. This will enable the Institute to formulate and execute joint projects with designated national authorities.

**Support for the development of an IICA Fablab for Agriculture**

Since September of 2018, the Project Management Unit has actively supported the efforts of the IICA Costa Rica Delegation, the Information/Communication Technologies and Digital Agriculture Unit and the Directorate of Corporate Services to set up a digital fabrication workshop (fablab) at the Institute's Headquarters, with a focus on agriculture. The project is being developed in collaboration with Costa Rica's Ministry of Science, Technology and Telecommunications (MICITT) and its Superintendency of Telecommunications (SUTEL). The plan is to establish the first work areas of this fablab by mid-July, to coincide with the visit of the Ministers of Agriculture of IICA's Member States, who will be attending the Thirty-Ninth Regular Meeting of the Institute's Executive Committee.

*And we continue to move forward...*
