ANNEX II-1

Report of A committee Established Within
The Ministry of Agriculture and Natural
Resources To Make Proposals To The Minister
Regarding The Problem of Surplus Fresh Milk

Background

Over the period 1980 to 1984 the Pine Hill Dairy increased its intake of fresh milk from Dairy Farmers from 3,203,667 kg. to 3,753,988 kg. This represents an average annual increase of 4.31 percent over the period. Of significance however is the fact that for the period 1982 to 1983 there was an increase in milk intake of 10.24% while for the period 1983 to 1984 the increase was 13.00%. For the period January to June 1985 the increase in milk intake was of the order of 8.1%.

The Pine Hill Dairy is unable to dispose of all the milk supplied by dairy farmers in a fresh state since the supply is currently in excess of the demand. Some of the fresh milk consequently has to be utilized in the manufacture of other products such as evaporated milk.

The diversion of fresh milk into manufactured milk presents a financial problem to the Dairy. The manufactured product is controlled at a price which accommodates the utilization of in-expensive powdered milk in the manufacturing process. However that price is too low to facilitate successful utilization of the higher priced fresh milk in the manufacturing process.

According to information supplied by the Pine Hill Dairy some 758,455 litres of fresh milk was diverted to the canning division during 1984. This costed the Company some \$985,992.00. As a means of improving the financial viability of the Dairy therefore it is important that the diversion of fresh milk into the canning division be minimized or even eliminated completely.

Important Considerations Regarding The Treatment
Of The Surplus Milk Situation

There are a number of matters which must be given consideration in any proposal to deal with the surplus milk situation. The more important considerations may be listed as follows:-

- (i) The thirty-five farms supplying milk to the Dairy represent only a small proportion of the cattle farmers in Barbados even though they account for a substantial proportion of the total output of milk;
- (ii) Farmers shipping milk to the Dairy enjoy a guaranteed price as well as an assured market;

- (iii) Barbados is a high cost producer of fresh milk;
- (iv) Many Barbadian consumers have a preference for evaporated milk as against fresh milk;
- (v) Evaporated milk is cheaper than fresh milk;
- (vi) Fresh milk has a greater nutritional value than evaporated milk;
- (vii) While the utilization of imported powdered milk represents a leakage of scarce foreign exchange from the country it also helps to control the cost of living by allowing evaporated milk to be produced and sold at a much lower price;
- (viii) Efforts to achieve an expansion in the consumption of fresh milk is more likely to be successful in the long term if directed towards children rather than adults;
- (ix) Both the dairy farmers and the Pine Hill Dairy are dependent on each other and therefore need to protect each other's interest;
- (x) The Dairy Industry is still in its developmental stage. Consequently any programme for its future development must be able to accommodate new entrants, as well as readjustments or reorganization on existing farms; and
- (xi) The Pine Hill Dairy has been provided with certain incentives and privileges by the Government of Barbados and must therefore be prepared to play a key role in the development of the industry.

Recommendations

The long term objective of the Dairy Industry should be to minimize dependence on imported raw materials as well as processed milk products. In particular the Industry should strive to reduce the need to utilize imported powdered milk in the production of evaporated or condensed milk.

It is appreciated that the present price of fresh milk at the farmgate precludes its utilization in the manufacture of evaporated milk. It is also appreciated that it would be unreasonable to expect the Pine Hill Dairy to accept milk which it cannot reasonably be expected to dispose of economically.

Some action should be taken to better facilitate the disposal of locally produced fresh milk. In this regard there are at least two alternatives which should be given consideration. These alternatives are outlined below.

Alternative A

1. As a means of helping to increase the consumption of fresh milk serious consideration should be given to its re-introduction into the primary schools. This scheme should be instituted on a pilot basis in a few schools in the first instance.
2. A small increase in the price of evaporated milk should be permitted to enable the Pine Hill Dairy to divert a greater volume of fresh milk to its canning operations without unduly affecting its viability;

Alternative B.

1. A fresh milk quota should be given to individual farmers shipping milk to the Dairy starting three years hence;
2. A study should be undertaken during the next year to determine the most appropriate basis on which to allocate individual quotas given the importance of factors such as stocking rate and level of capitalization on production efficiency.
3. The Pine Hill Dairy should be required to offer farmers a guaranteed price for milk supplied under individual quotas.
4. Farmers should be required to sign supply contracts with the Dairy;
5. A sub-committee comprising of representation from the Pine Hill Dairy, the Dairy Farmers Association and the Ministry of Agriculture should be established to advise the Minister of Agriculture on the allocation of quotas and to monitor the implementation of the quota system;
6. Once approved by the Minister of Agriculture the Dairy should be expected to comply with the quota allocation;

7.

Until such time as a full-fledge quota system can be implemented annual growth in the industry should be controlled taking into consideration to the fullest extent possible the interest of the farmer, the Dairy and the consuming public as follows:-

- (i) The Pine Hill Dairy should be required to provide an assured market and a premium price to farmers for fresh milk supplied over and above that for the preceding year provided that the increase is not in excess of the annual average for the period 1982-84. (i.e 7.26%);
- (ii) Milk supplied to the Dairy over and above the limit set at (i) above should be classified as "surplus milk" whenever it is utilized in the manufacture of evaporated or condensed milk;
- (iii) "Surplus milk" should attract a price somewhere between the present farmgate or premium price and the price of an equivalent quantity of imported powdered milk;
- ((iv)) Only farmers whose individual supply of fresh milk to the Dairy exceed the controlled level should be subjected to the "surplus milk" price and then only for the proportion so classified;
- (v) All new entrants to the industry should be given an annual quota additional to the control level established as at (i) above;
- (vi) New entrants to the industry be limited to two farms per annum except in cases where the Dairy considers a greater increase feasible;
- (viii) Farmers interested in shipping milk to the Pine Hill Dairy be required to apply in Writing to the Board of Dairy.
- (ix) School children should be given every encouragement to increase their consumption of fresh milk.

5.

The Committee was unable to reach a concensus regarding the two alternatives. On the one hand the Dairy farmers favoured Alternative A but were also of the view that:

1. They could not afford a reduction in the present farm-gate price of fresh milk;
2. They should not be required to accept a quota system until such time as imported powdered milk was no longer being utilized in the manufacture of evaporated or condensed milk by the canning division of the Pine Hill Dairy.

On the other hand the Pine Hill Dairy favoured Alternative B but was of the view that:

- (i) A quota system should be introduced one year hence if possible;
- (ii) A limit should be place on the quantum of milk which can be diverted to its canning division at a premium price in any one year and that limit should be 750 000 litres.

Experience suggest that it is unlikely that the Dairy farmers and the Pine Hill Dairy will ever agree on an approach to the "Surplus fresh milk" problem. The Ministry of Agriculture and Natural Resources will therefore have to determine the most appropriate approach to the problem.

6.

APPENDIX 1

INTAKE OF MILK BY PINE HILL DAIRY 1980-84

	<u>Quantity (kg)</u>	<u>% Annual Increase/Decrease</u>
1980	3,203,667	-
1981	3,058,429	- 4.53
1982	3,013,655	- 1.46
1983	3,322,393	+10.24
1984	3,753,988	+13.00

NOTE

Average annual increase 1980-84 + 4.31%
Average annual increase 1982-84 + 7.26%

ANNEX II-2

LIVESTOCK DEVELOPMENT FUND

Establishment of a Livestock Development Fund

Given that there is a need to provide an appropriate credit facility for producers a Livestock Development Fund should be established. The general objective of the fund should be:

- a. To facilitate the rapid expansion of the beef cattle and sheep industries;
- b. To encourage more efficient utilization of agricultural land.

Specific Purpose of the Fund

The fund should be used to provide loans to livestock producers for the following purposes:

- a. Purchase of cattle and sheep to be used for production of meat;
- b. Establishment of buildings for housing beef cattle and sheep;
- c. Fencing of improved pastures;
- d. Installation of watering systems for livestock;
- e. Purchase of machinery and equipment;
- f. Establishment of feed storage facilities;
- g. Any other purpose connected to livestock production as may be approved by the Minister.

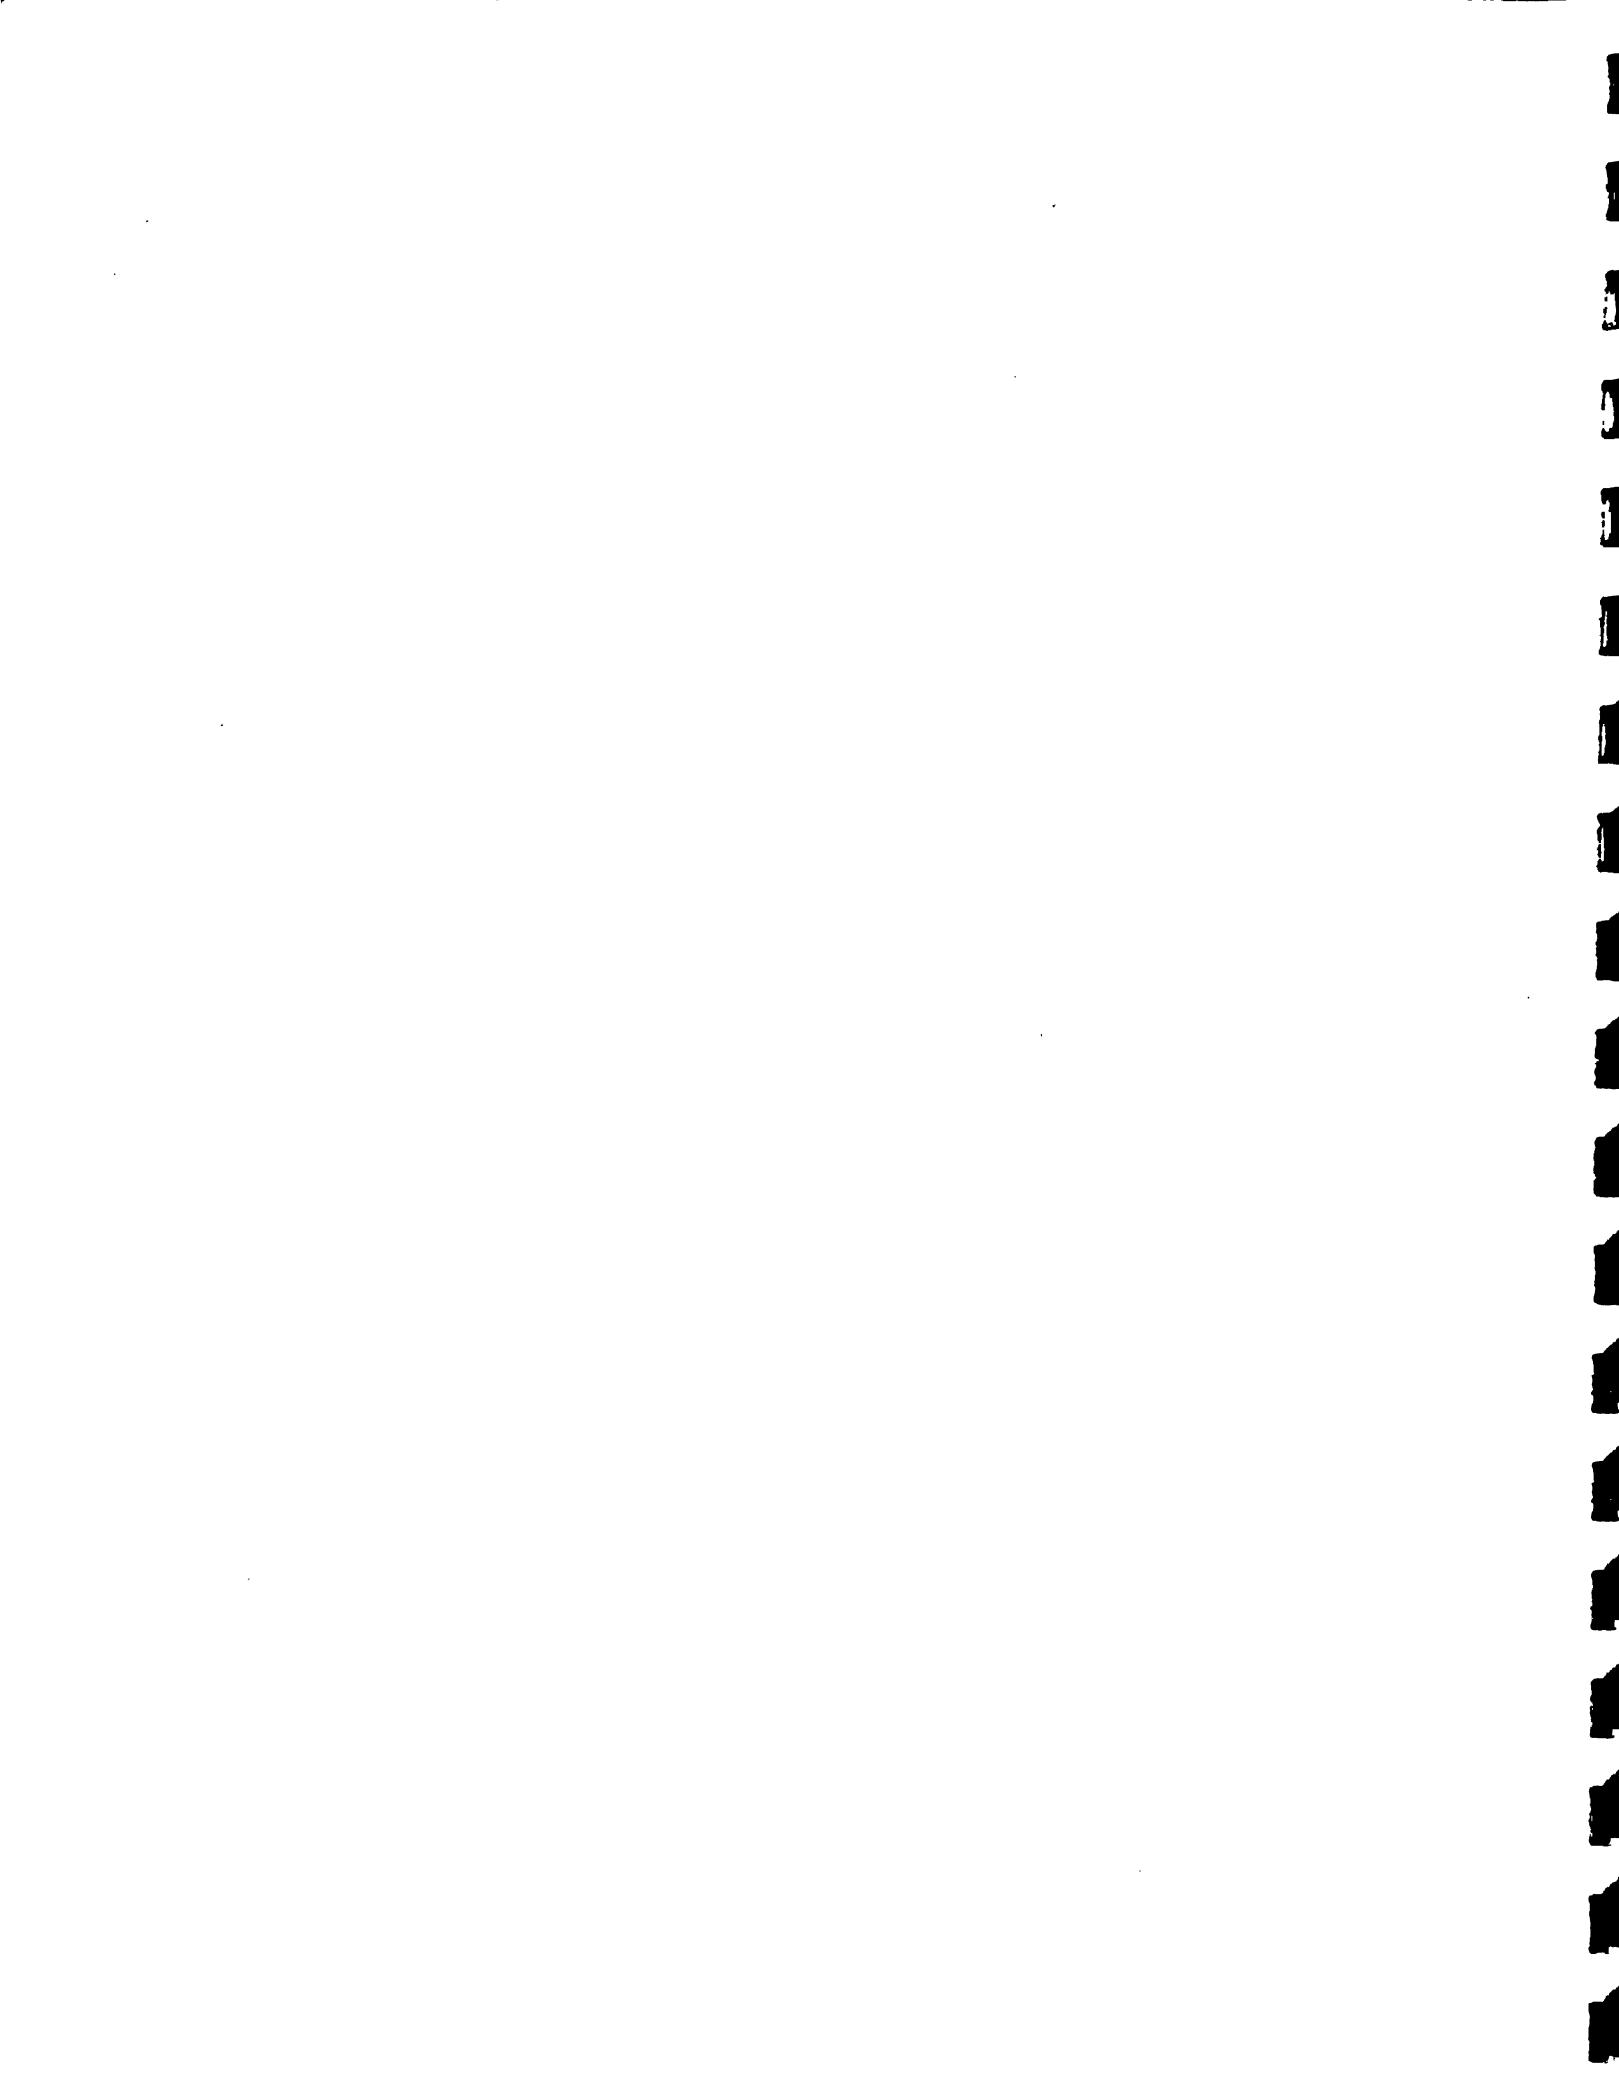

Eligibility

All Livestock producers or potential producers should be eligible for loans.

Application Procedure

The application procedures will be as follows:

- a. Applications for loans will have to be made to the Permanent Secretary, Ministry of Agriculture, and Natural Resources;
- b. All applications will have to be made on the special forms to be provided for the purpose;
- c. All applications will have to be accompanied by a

comprehensive farm plan.

Processing of Applications

- a. All applications will be considered by a Loans Committee;
- b. The Loans Committee having considered an application will make an appropriate recommendation for the approval of the Minister.

Composition of Loans Committee

- a. Chief Agricultural Officer
- b. Senior Accountant
- c. Senior Agricultural Officer (Livestock)
- d. Chief Economist
- e. Deputy Permanent Secretary

Conditions of Disbursement

Funds should be disbursed under the following conditions:

- a. Loans should be made available for a maximum of 10 years.
- b. Adequate security will be required for all loans.
- c. The interest rate should be 3%.
- d. All applicants will be entitled to a three (3) year moratorium if requested.
- e. The Borrower should be required to enter an agreement with the lender in respect of the repayment of the loan.

Capitalization of Fund

The Livestock Development Fund will be established with an initial subvention of Bds \$1.0 million. The required funds will be mobilized by some combination of the following means:

- a. Through a direct subvention from the Treasury.
- b. Through the imposition of a charge of 10c/per kg on all imports of fresh, chilled or frozen beef and mutton.
- c. Through a Loan from the Inter-American Development Bank or one of the other International or Regional

Financial Institutions.**Administration of the Fund**

The fund can be managed through one of the following alternatives:

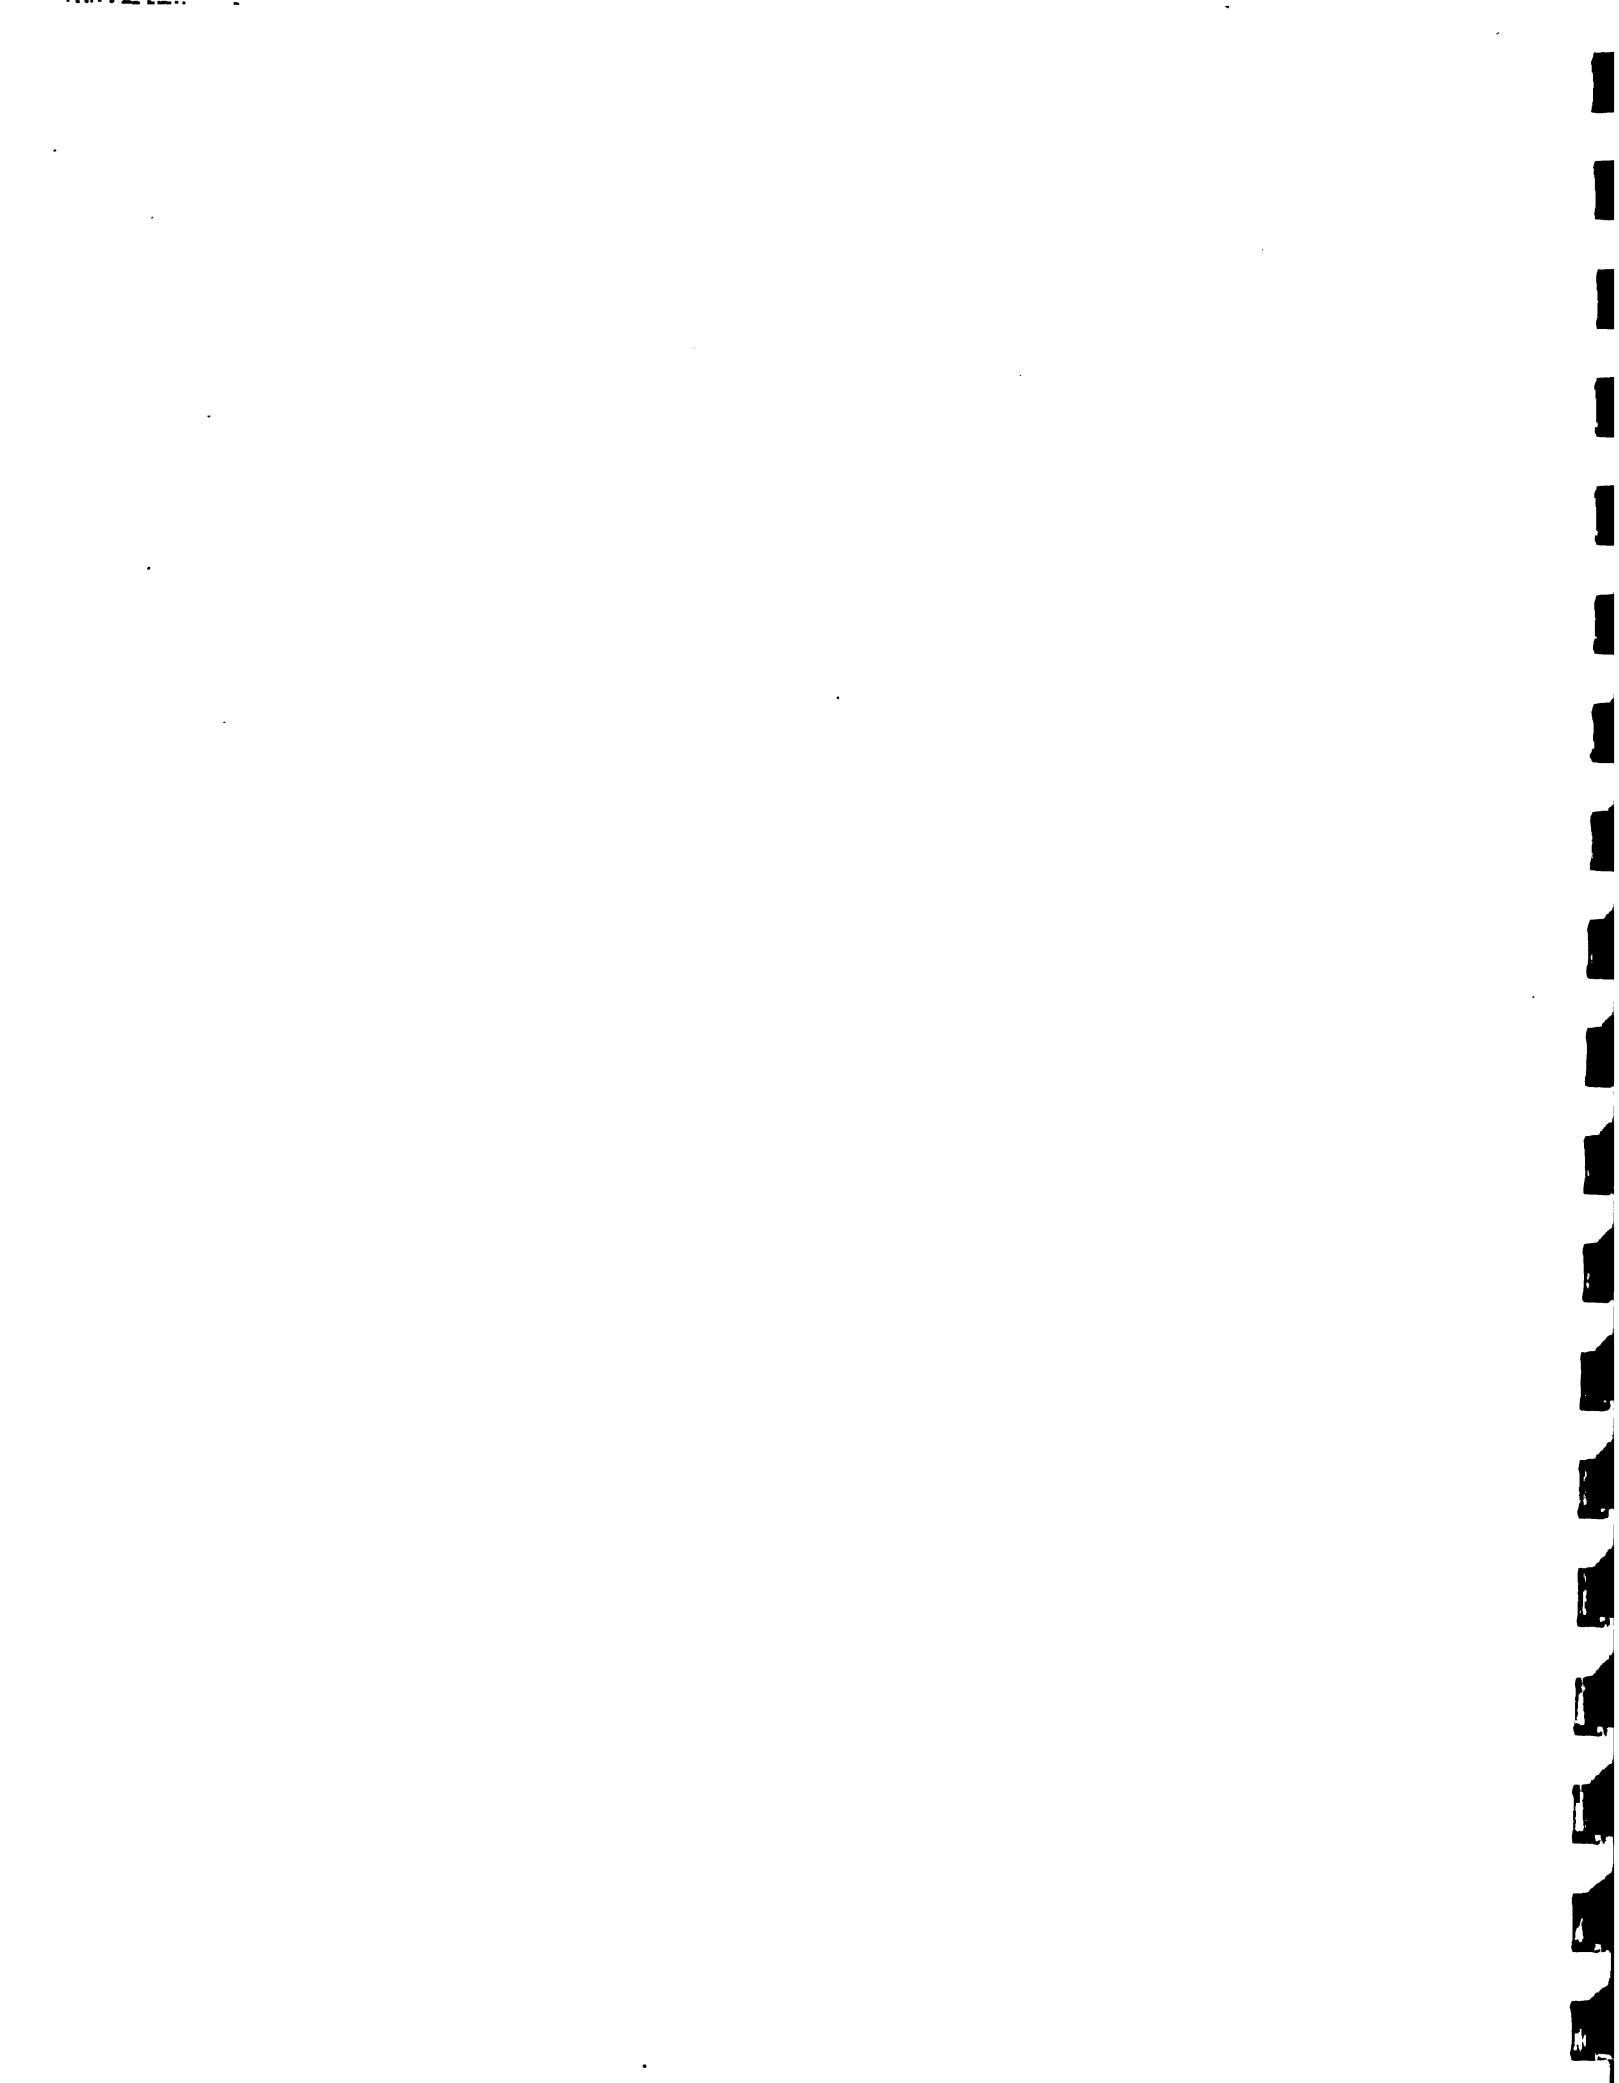

- a. The Accounts Department of the Ministry could be given responsibility for disbursement of funds as well as for the collection or receipt of repayments.
- b. Alternatively the Fund could be operated through the Agricultural Division of the Barbados National Bank where arrangements for disbursements and repayments could be made. The Ministry would however determine which applicants are entitled to loans and so advise the Bank.

ANNEX III - 4

Dear Sirs,

Re: Proposed Abattoir Project.

Enclosed please find our drawings Nos. 397/86/1 - A and B for the above proposed abattoir project. Drawing A shows the proposed site plan and perspective sketch of the buildings. Drawing B shows ground and first floor plans giving the general layout of the buildings and the flow of the product from live animals to processed meat. This drawing also shows the North and East elevations.

The Site:

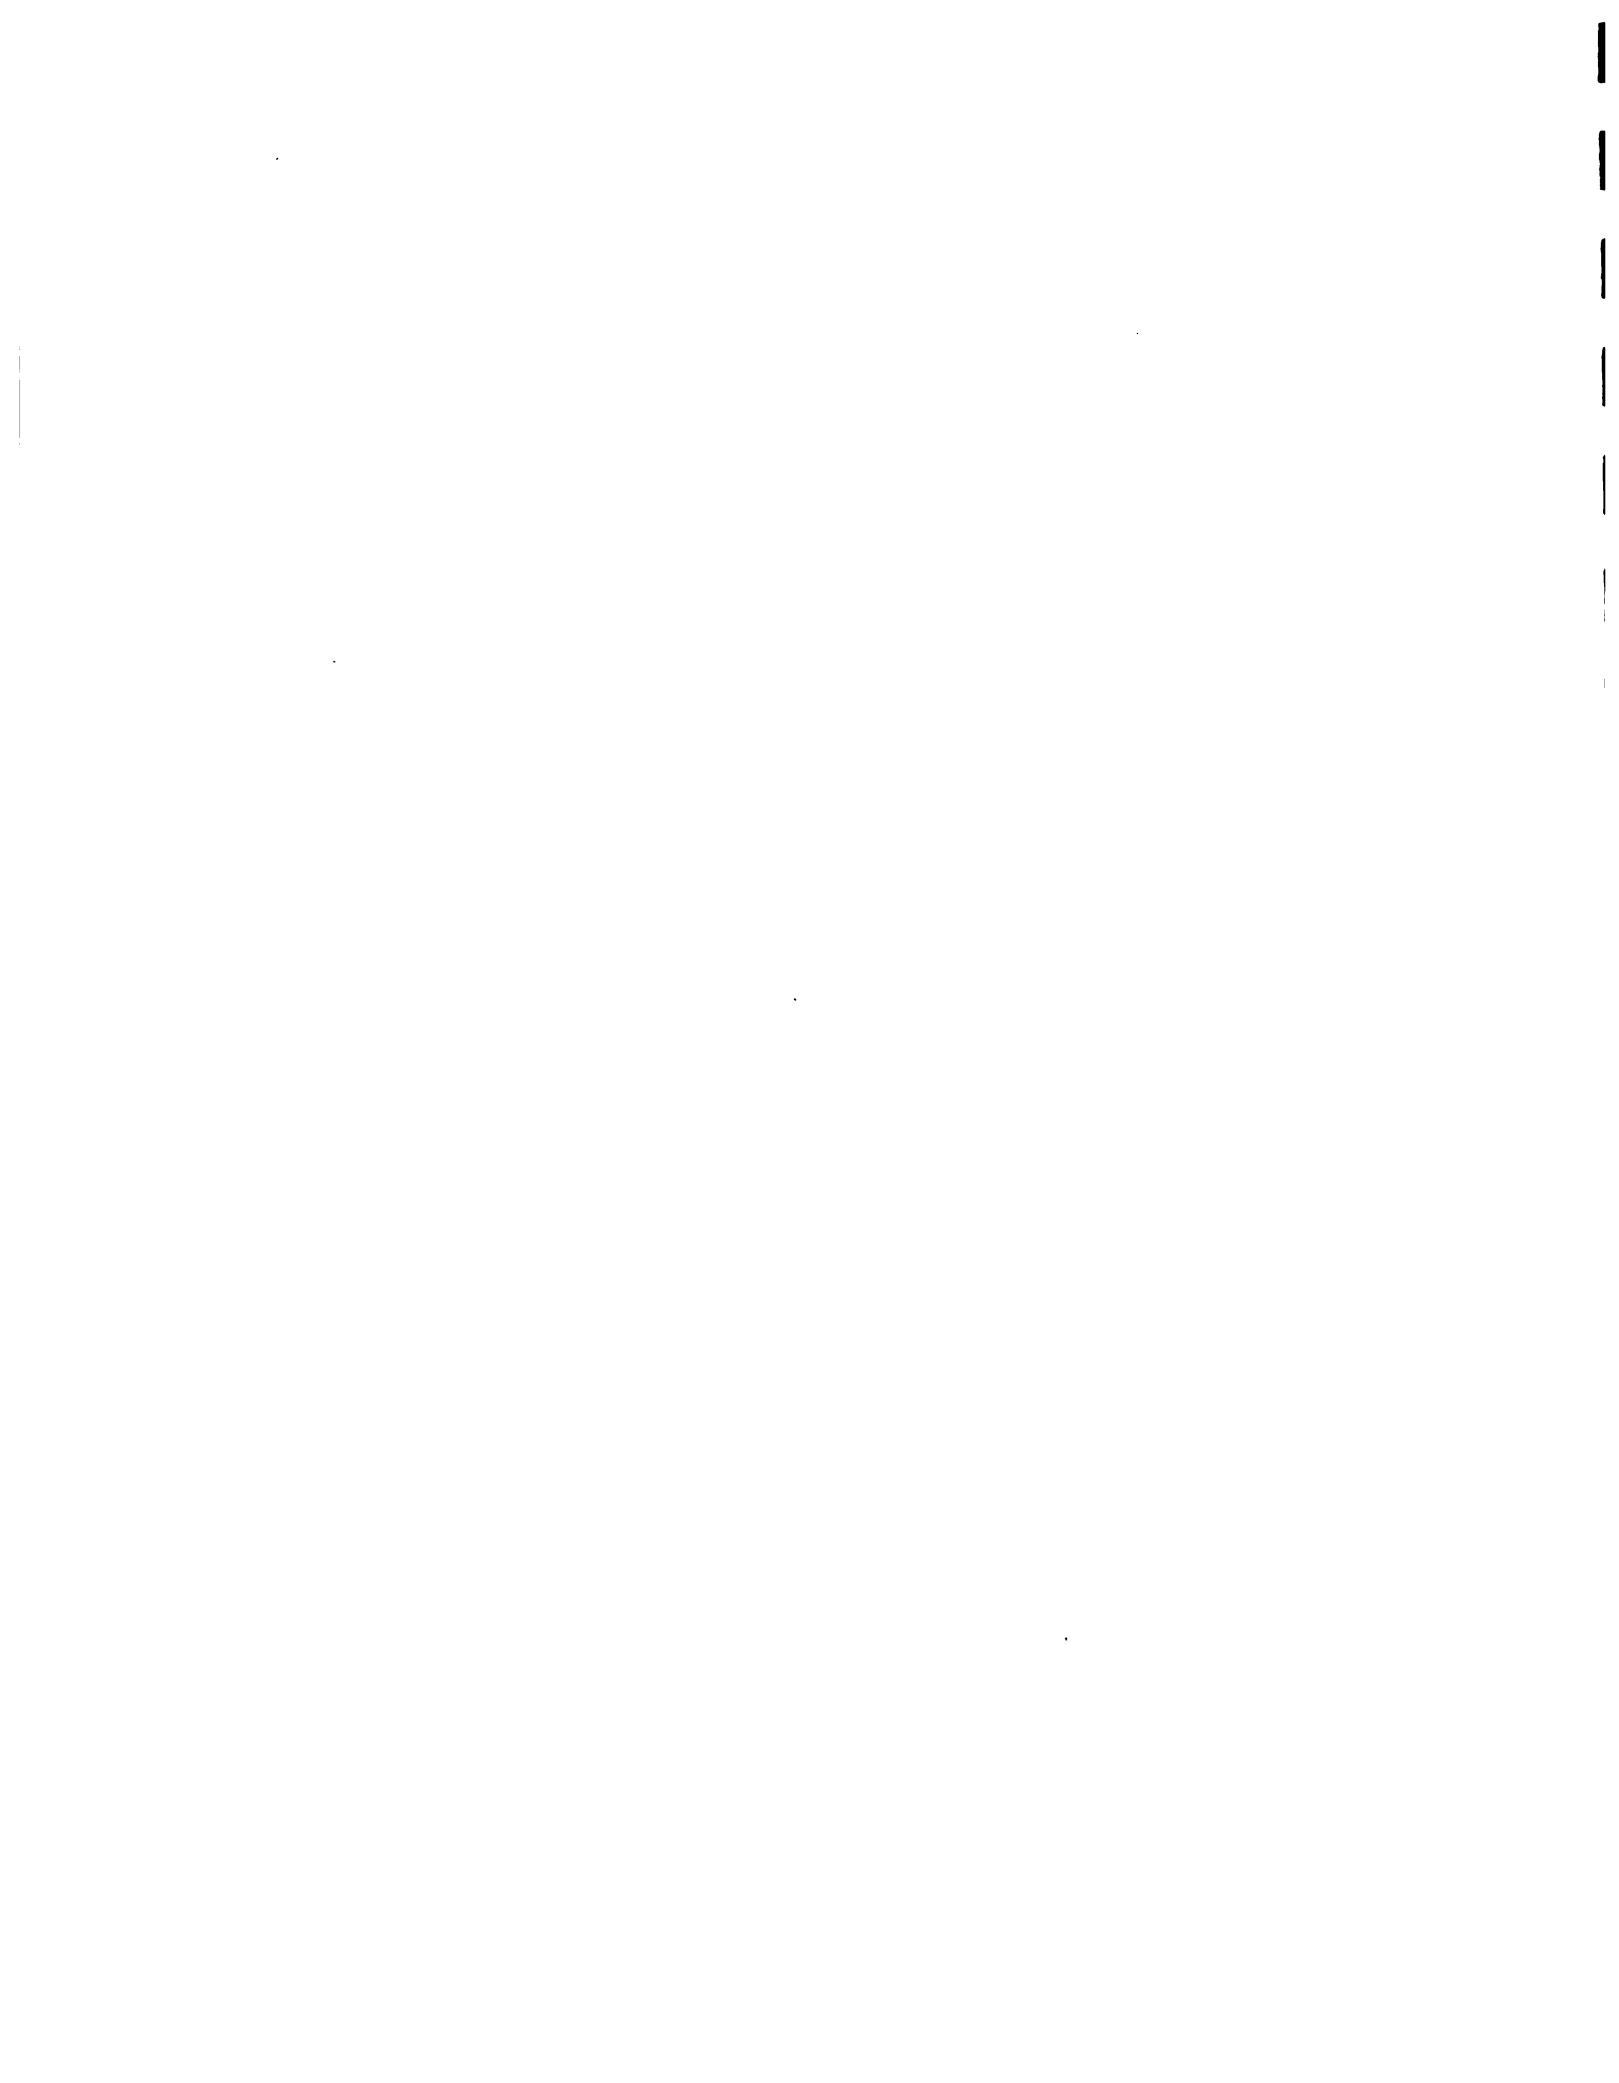

Situated at Lower Estate, St Michael (42,000N - 62,100E) indicated to us by the Ministry of Agriculture, Food and Consumer Affairs, is a triangle piece of land abutting Highway 3 on the North West, the Belle Road on the East and a secondary road which joins the above two (this road continues to Charles Rowe Bridge) on the South. The site is on a class 2 water table area, the Southern boundary of which adjoins a class 1 water table area and the Northern boundary a class 3 water table area. See location plan enclosed.

Orientation of Building:

We have located the buildings on the Northern side of the site so as to place them as far as possible from the class 1 water area and as close as possible to the class 3 water area for the safe disposal of effluent from the plant.

We have located the entrance and exit to the site on the Belle Road as far south as is practical so as to have as long a run as possible before the junction with Highway 3.

As 95% of the year the direction of the prevailing winds are between the NE to SE we have laid out the buildings to have the office and the "Clean" side to the East and the "Dirty" side to the West so that smells etc. from the "Dirty" side will be blown away from the building and not effect the office and the "Clean" areas.

General Layout of Building.

Animals will be received on the Northern side of the complex. Those by truck will exit onto an adjustable ramp, should any be received on foot there is a ramp to accomodate these. The animals will then be inspected by the vet and then weighed before being taken to their appropriate pens. Any sick animals will be taken to the sick pen provided. Trucks will be washed before leaving the site.

On slaughtering days the appropriate animals will be lead through their runs to the abattoir - beef on the Southern side and the lambs and hogs on the Northern side. The lambs and hogs are kept close together as the same height overhead rail can be used for both types of animals. As more hogs will be slaughtered than lambs we have located the VISCERA Department close to the hogs and lambs rail so as to have the minimum transfer distance of the viscera after its removal from the animal.

Inedibles will be taken to the Inedible Department for disposal. Hides will be treated in the building to the North of the area for shipment.

The paunch manure will be transferred by screw conveyor from the Viscera Department into trolleys which will take it to the Fermenting Tanks to the West of the stock pens. When fermented it can be used as fertilizer. After the carcasses are eviscerated, split, washed, inspected and weighed they are moved by rail to the Chill Coolers and then to the Holding Coolers. In this area the beef is quartered so that it can be transferred to the same height rail as the lambs and hogs. From there they are either de-boned etc., delivered in quarters to the trade or stored. There is a blast Freezer to quickly reduce the temperature of the meat if it is to be stored in the storage freezer. In this area there is a small supervisor's office and a room for storing supplies. Also note we have separated the "clean" and "dirty" areas by a corridor.

We have located the Delivery and Receiving Clerks office to the East of the main doorway of the Packing etc. Department so as to protect this door from prevailing winds and rain.

The Compressor Room is located as close as possible to the freezers and cool rooms to give the shortest runs for pipes etc. Adjoining this room is the main switch gear and Transformer Room.

The abattoir staff will enter the building from the North which will give them direct access to their Wash and Changing Rooms on the first floor and the plant.

The office has direct access to the plant and the abattoir supervisor is so located as to see the operation of the abattoir from his office.

We have shown on our drawing A the proposed location of a Rendering Plant the roadway to this is included in our estimates. Should this plant not be built as this time a simple marl track is all that would be necessary to transfer paunch manure to the tanks, which would give a reduction in the cost of this item.

As this project is on a class 2 water table area, a treatment plant will be required to process the effluent from the abattoir before it is dispersed into the ground. (See Mr. Belzile's report on this). The plant floor is designed that all water will be transferred through drains to the treatment plant.

We estimate the cost of the buildings, roadways, fences etc. to the following outline specifications to be \$2,050,000.00 Barbados (see Kauffman & Associates enclosed preliminary budget). Please note these costs include for duty on imported materials, an estimated saving of \$223,700.00 (note this amount contains \$140,000.00 for the refrigerated building) could be possible if the project is Duty Free.

Main Building:

Foundation: Reinforced concrete.

Floors: Reinforced concrete - finished as follows:-

Epoxy - Abattoir, Inedible Department, Viscera Department, Corridor, Chill Cooler and Holding Cooler.

Ceramic Tiles - Gutting boning and packing department, supplies and washrooms.

Vinyl Asbestos - Offices and lunch rooms.

Walls: Fairfaced concrete blocks waterproofed on the exterior and painted. The interior faces of the abattoir, Inedible Department, Viscera Department and Corridors will be fibre glass lined. Ceramic tiles will be used in the Ladies and Gents Washrooms.

Roofs: Metal frame covered with insulated metal deck, waterproofed with Neoprene Hypalon.

Please Note The walls and roof over the Coolers, Packaging Department and Freezers will be prefabricated insulated panels, pre-finished. Only the concrete floor and finish and the waterproofing of the roof will be done by the local contractor.

Hide Treatment:

Foundations: Reinforced concrete.

Floors: Reinforced concrete, trowel finish.

Walls: Load bearing fairfaced concrete blocks painted.

Roof: Metal Sheets on timber frame.

Effluent Treatment:

Plant:

Foundations: Reinforced concrete.

Floors: Reinforced concrete, trowel finished.

Walls and

Roof: Steel framed buildings clad with metal sheets.

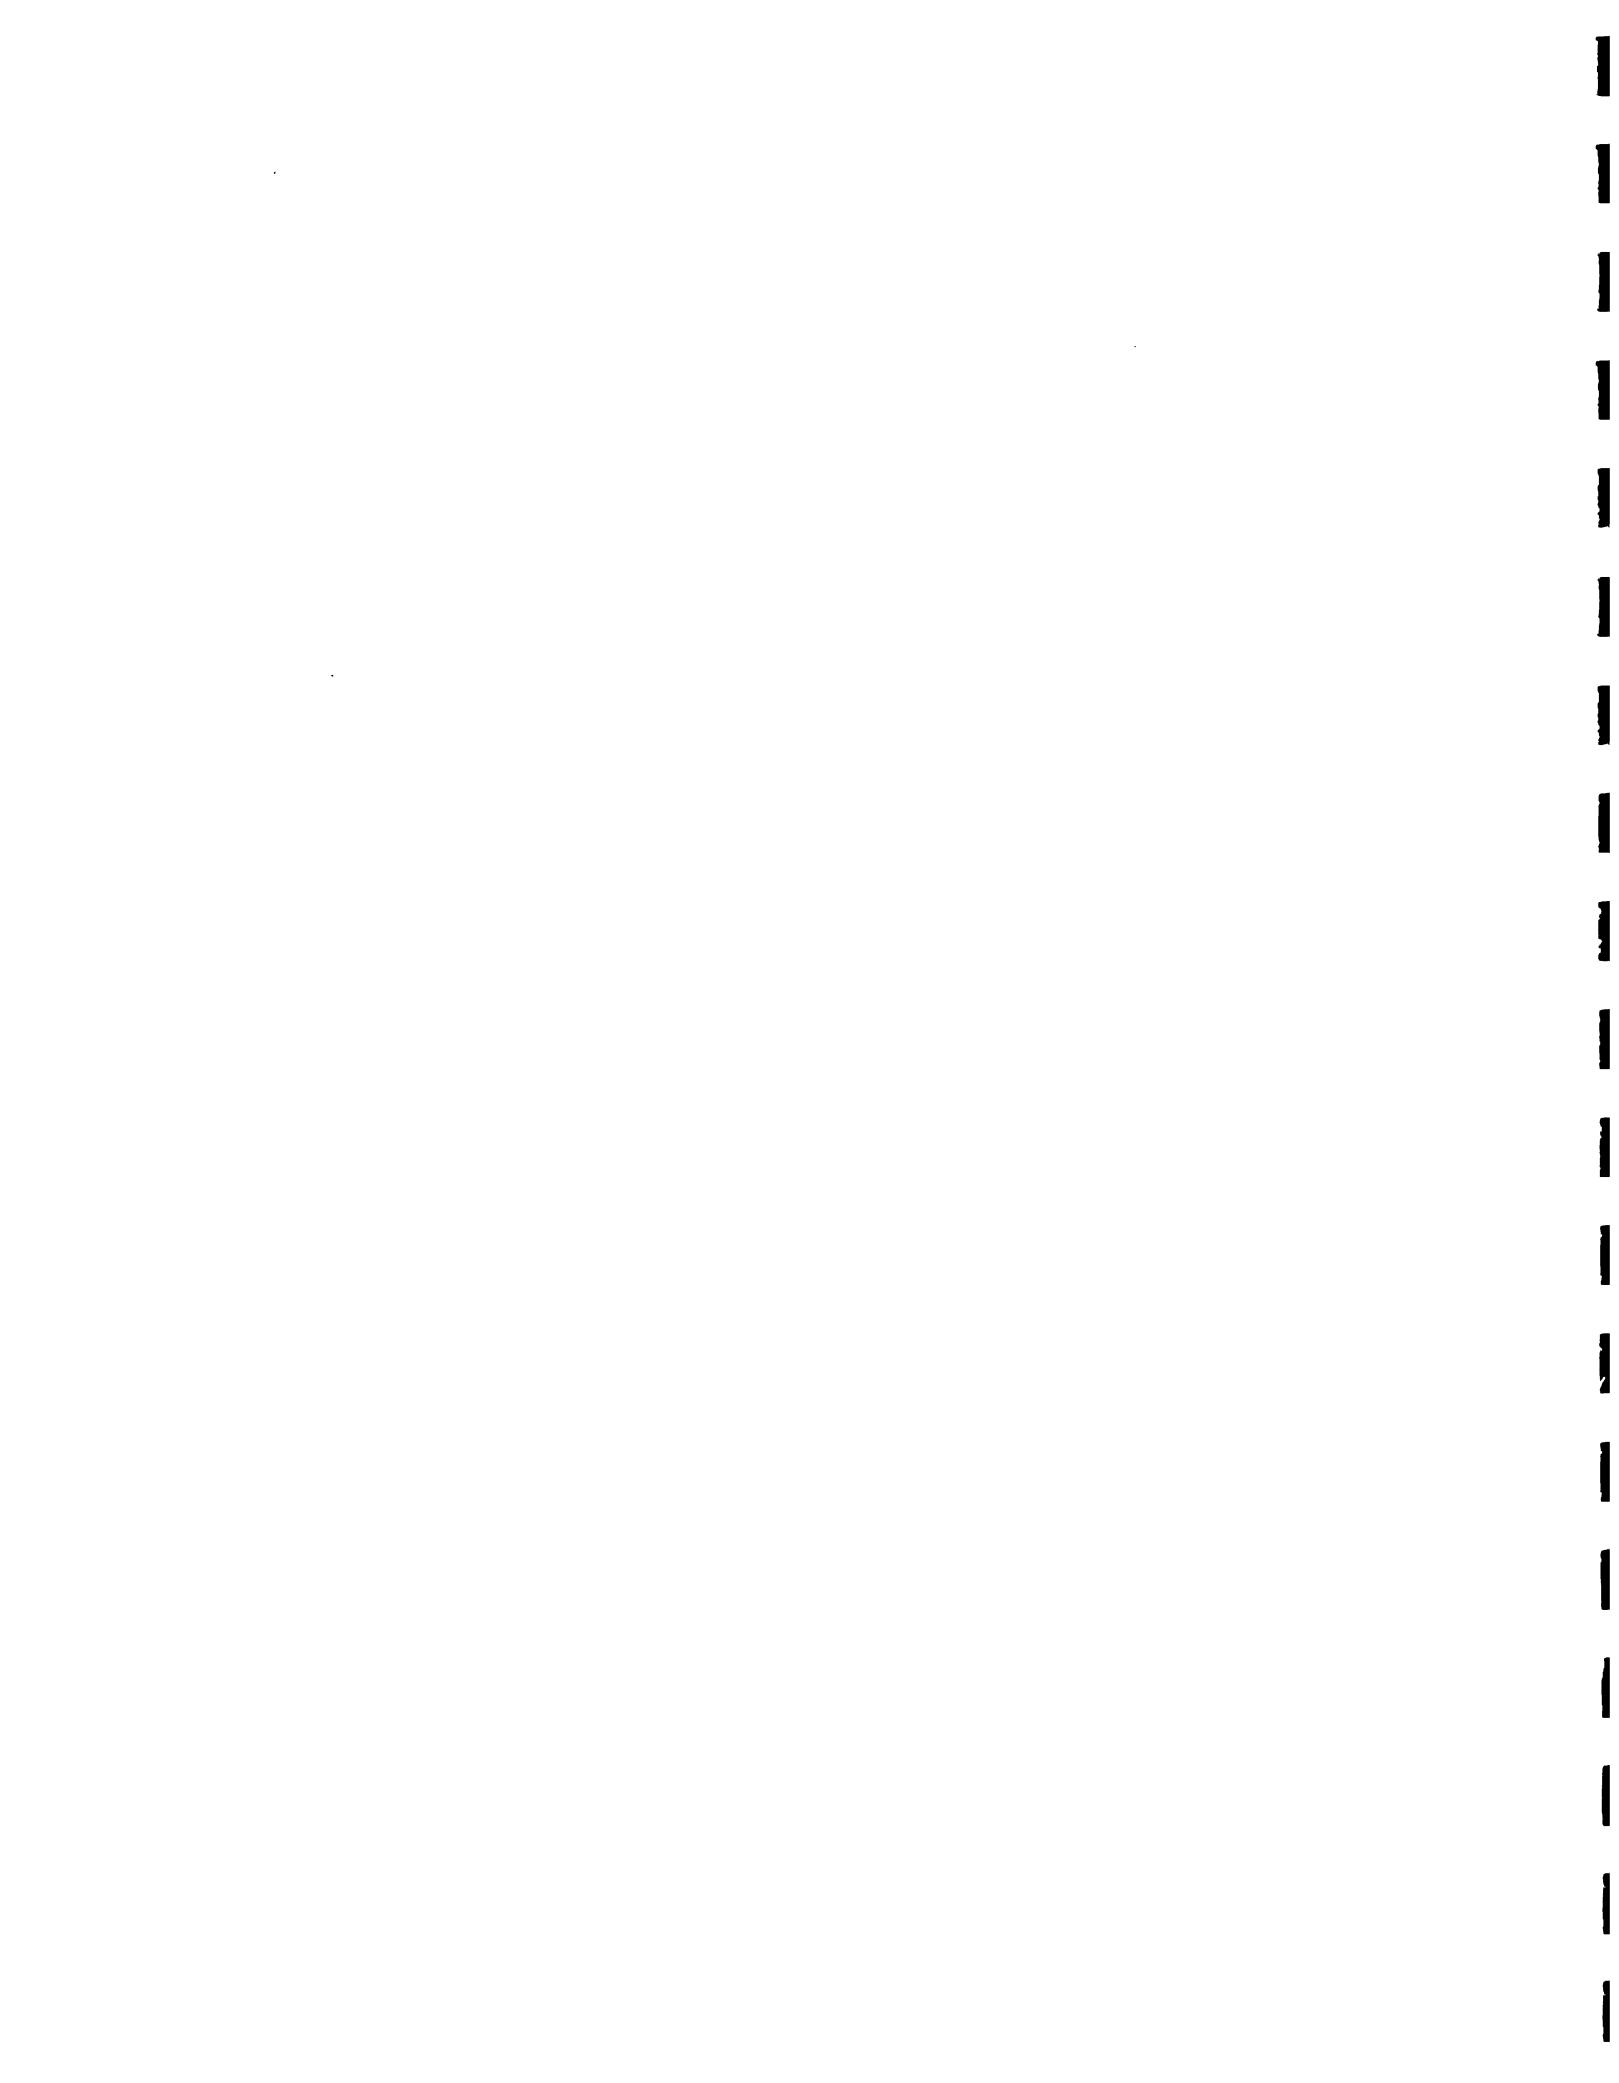

Livestock Pens and Paunch Manure Tanks:

Foundations: Reinforced concrete.

Floors: Reinforced concrete

Walls etc. Pipe columns. Side to pens - metal and/or concrete blocks.

Roof: Metal Sheets on timber frame.

Roadways and Parking Areas:

Barbergreen finish on suitable fill to carry the necessary loads.

Fences: 6' 0" high chain link wire secured to galvanised fence posts.

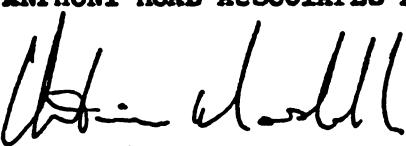

Hoping the above will meet with your approval,

We remain,

Yours faithfully,

ANTHONY HOAD ASSOCIATES LIMITED

BARBADOS

FOR

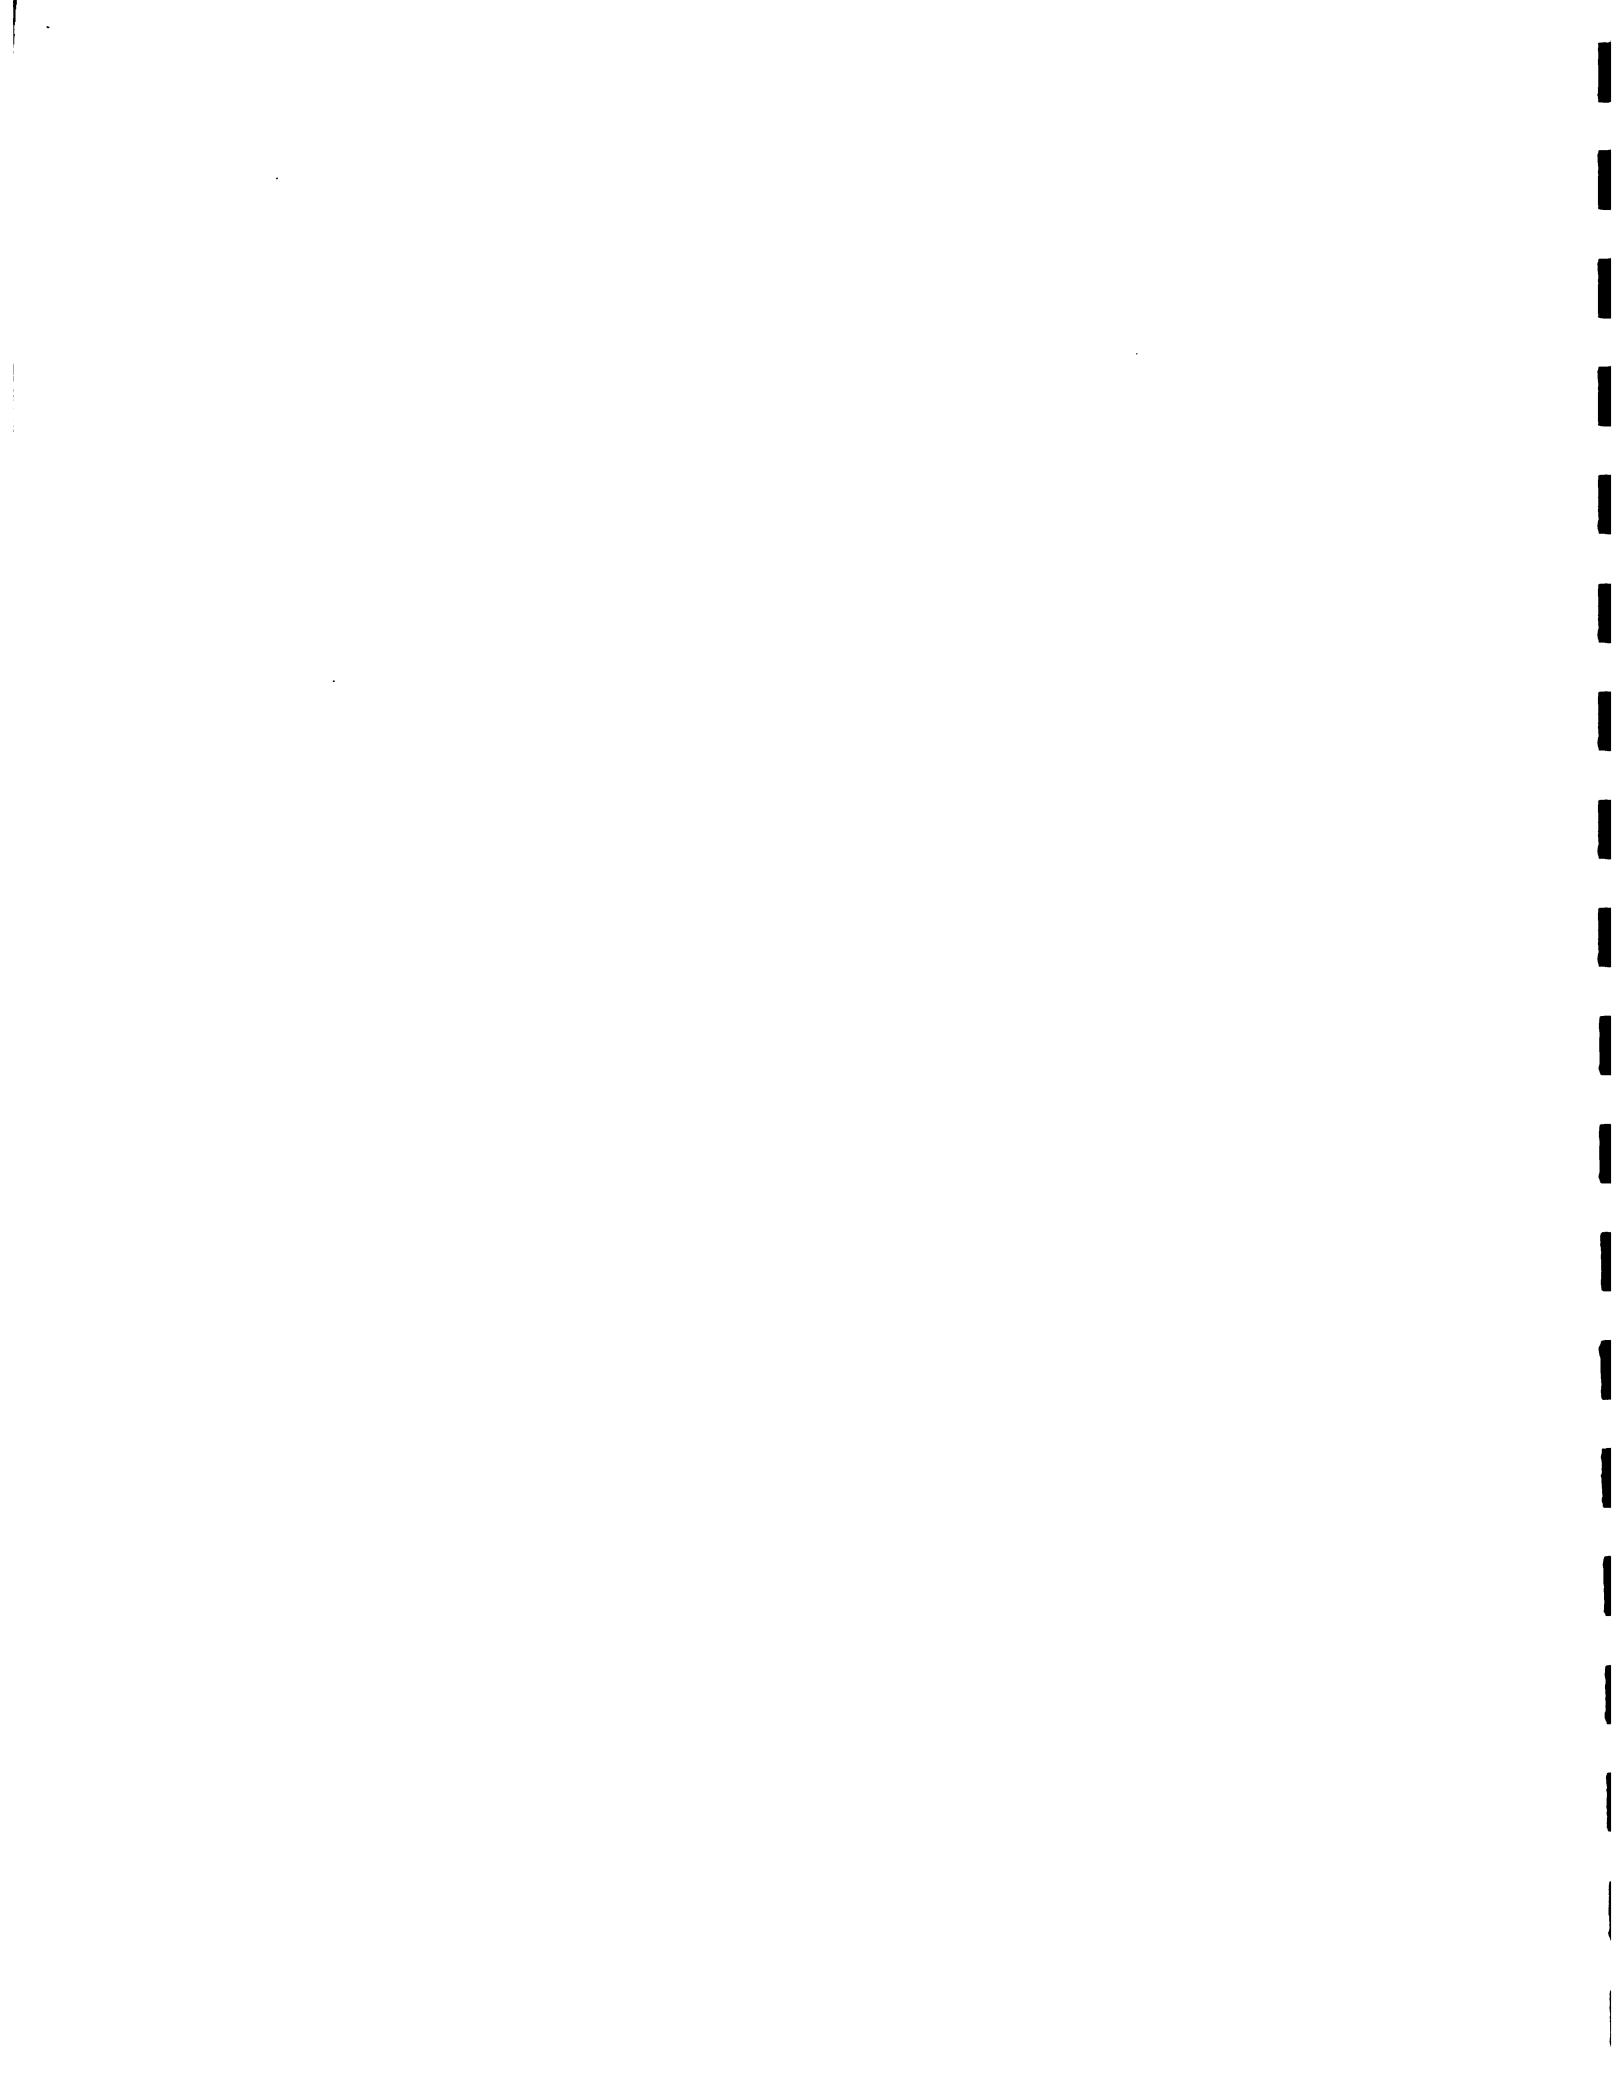

I.I.C.A./M.A.N.R - I.L.P

PRELIMINARY BUDGET ESTIMATE

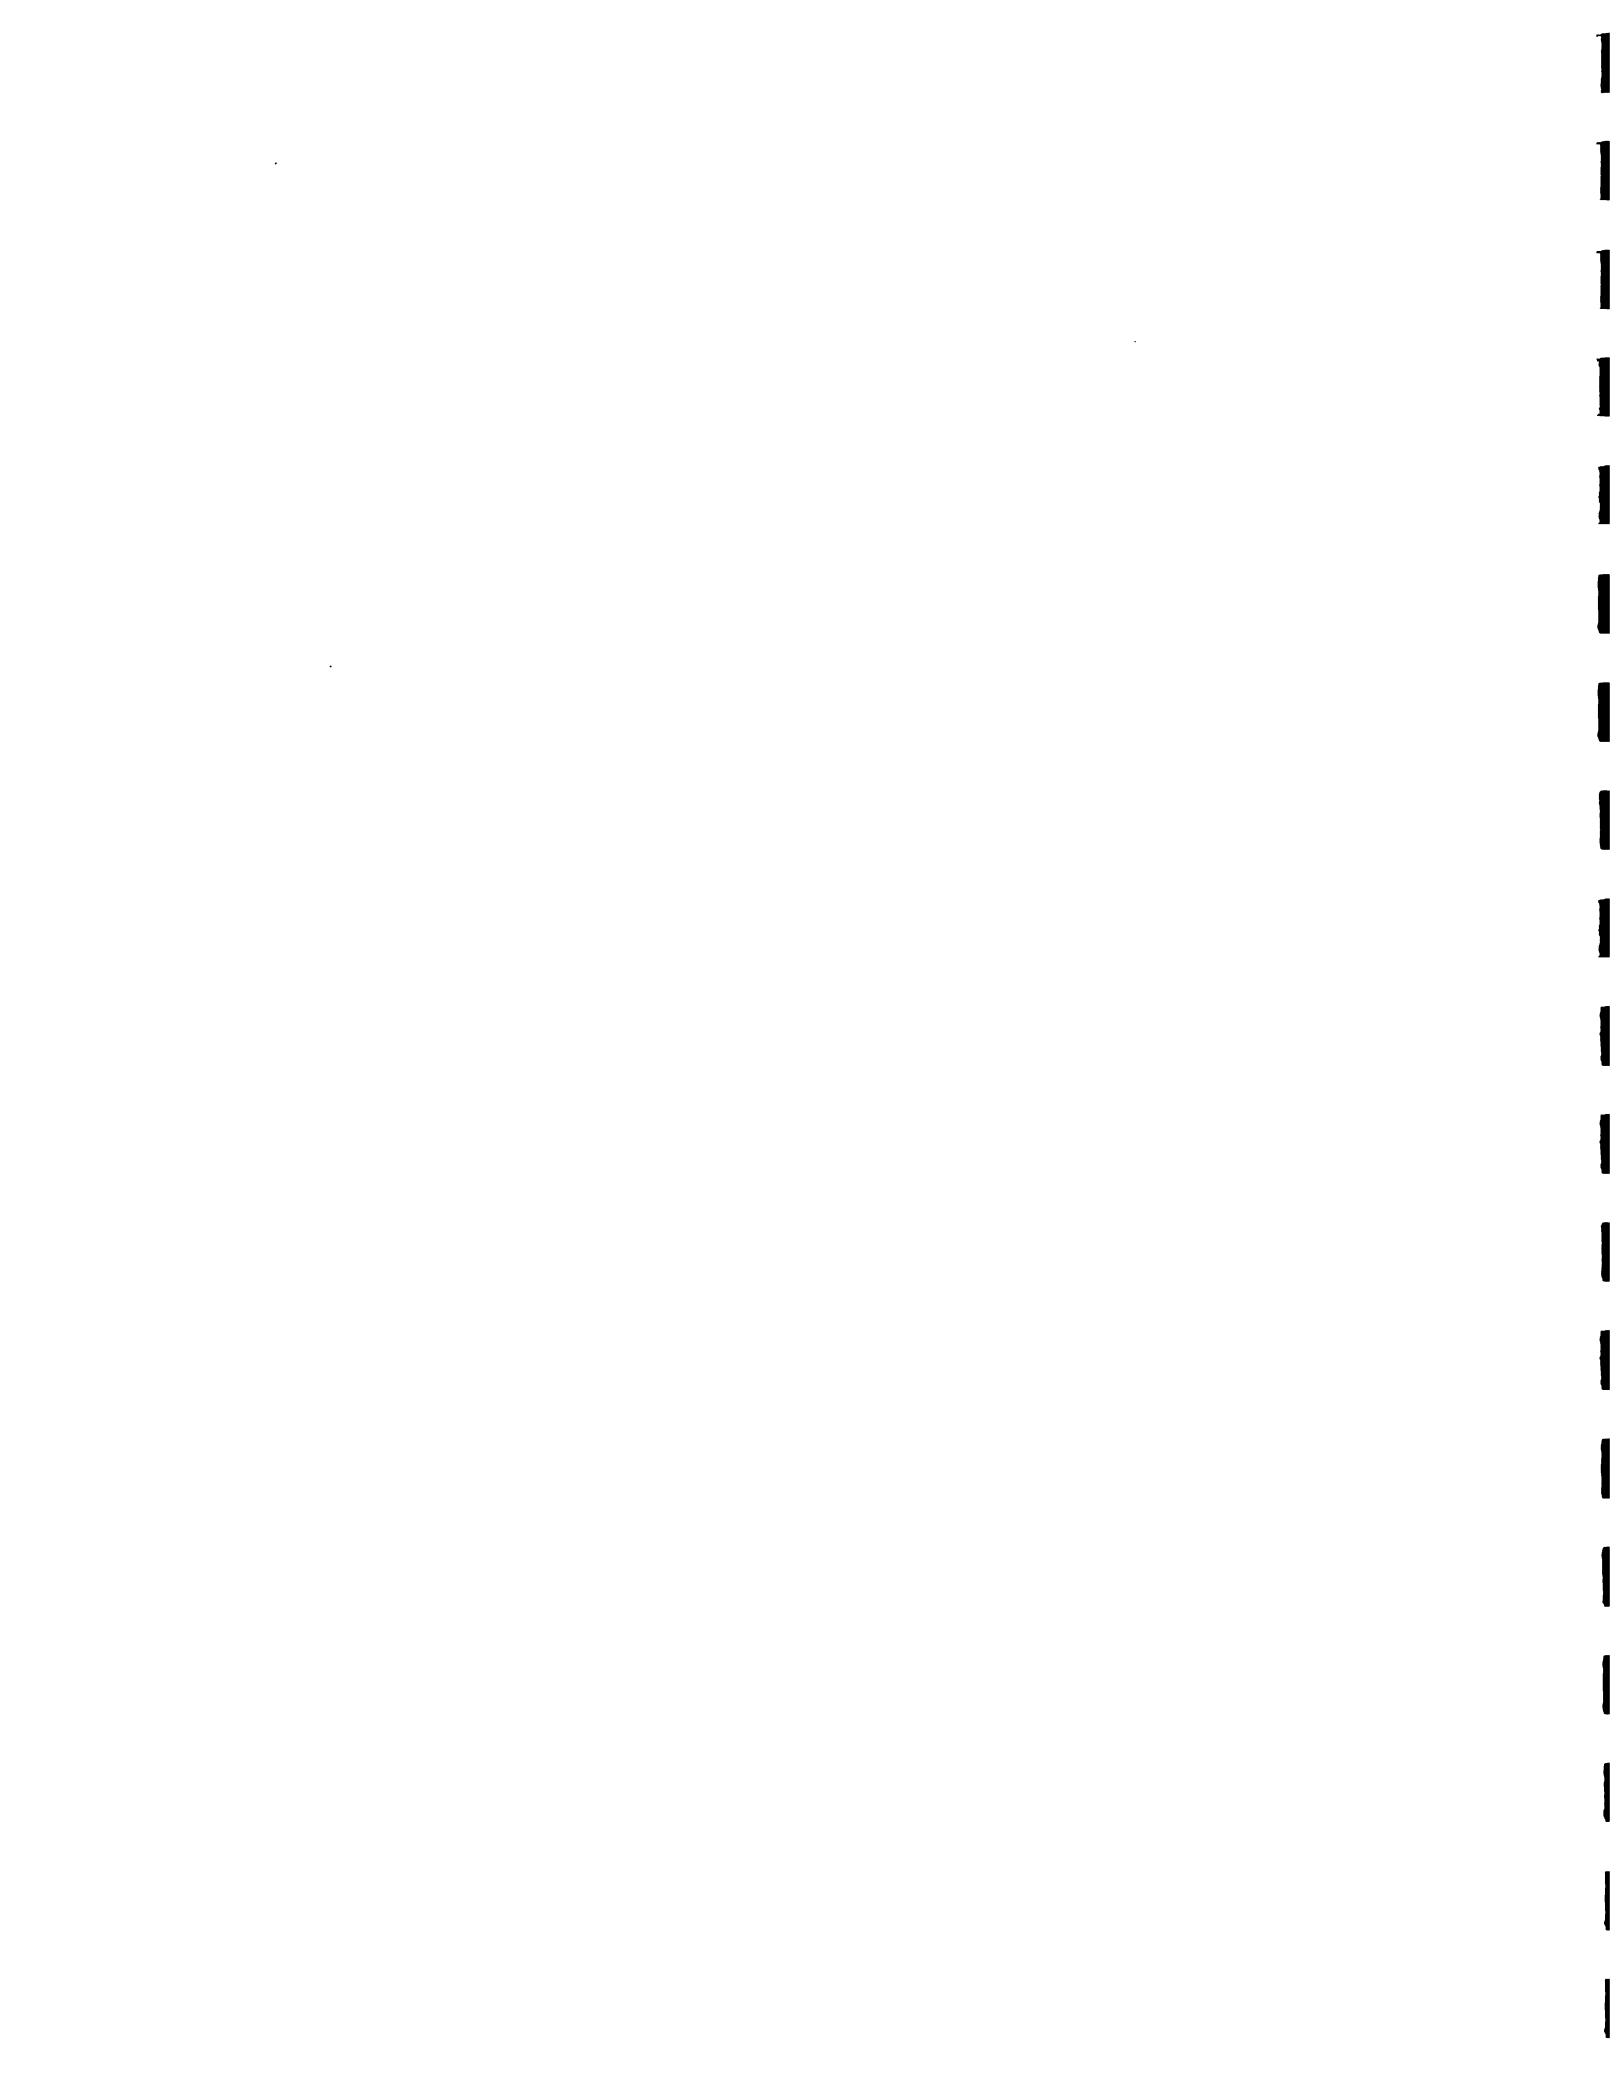

W.A. Kauffman & Associates
Chartered Quantity Surveyors

March, 1986

SUMMARY OF ESTIMATE

	B\$
Office Building	225,000.00
Abattoir	300,000.00
Mechanical	27,000.00
Viscera & Inedible	50,000.00
Offal	13,000.00
Transformer, Switchgear etc.	75,000.00
Refrigeration Building	400,000.00
Receiving & Delivery & Staff Accommodation	130,000.00
Hide & Effluent Treatment	70,000.00
Animal Pens	315,000.00
Roads and Parking Areas	205,000.00
Fencing & Gates	40,000.00
Landscaping	25,000.00
Drainage	25,000.00
Electricity & Water Supply	150,000.00
	<hr/>
	B\$2,050,000.00
	=====

NOTES TO THE ESTIMATE

1. EQUIPMENT

The estimate does not include any allowances for the following equipment:

Abattoir:

Lander

Hoists

Steam

Cradles

Scales

Viscera:

Tripe Wash

Screw Conveyor

Offal Cooler

Chill Stores:

Prefabricated Building

Refrigeration Installations

Receiving & Delivery:

Adjustable Ramps

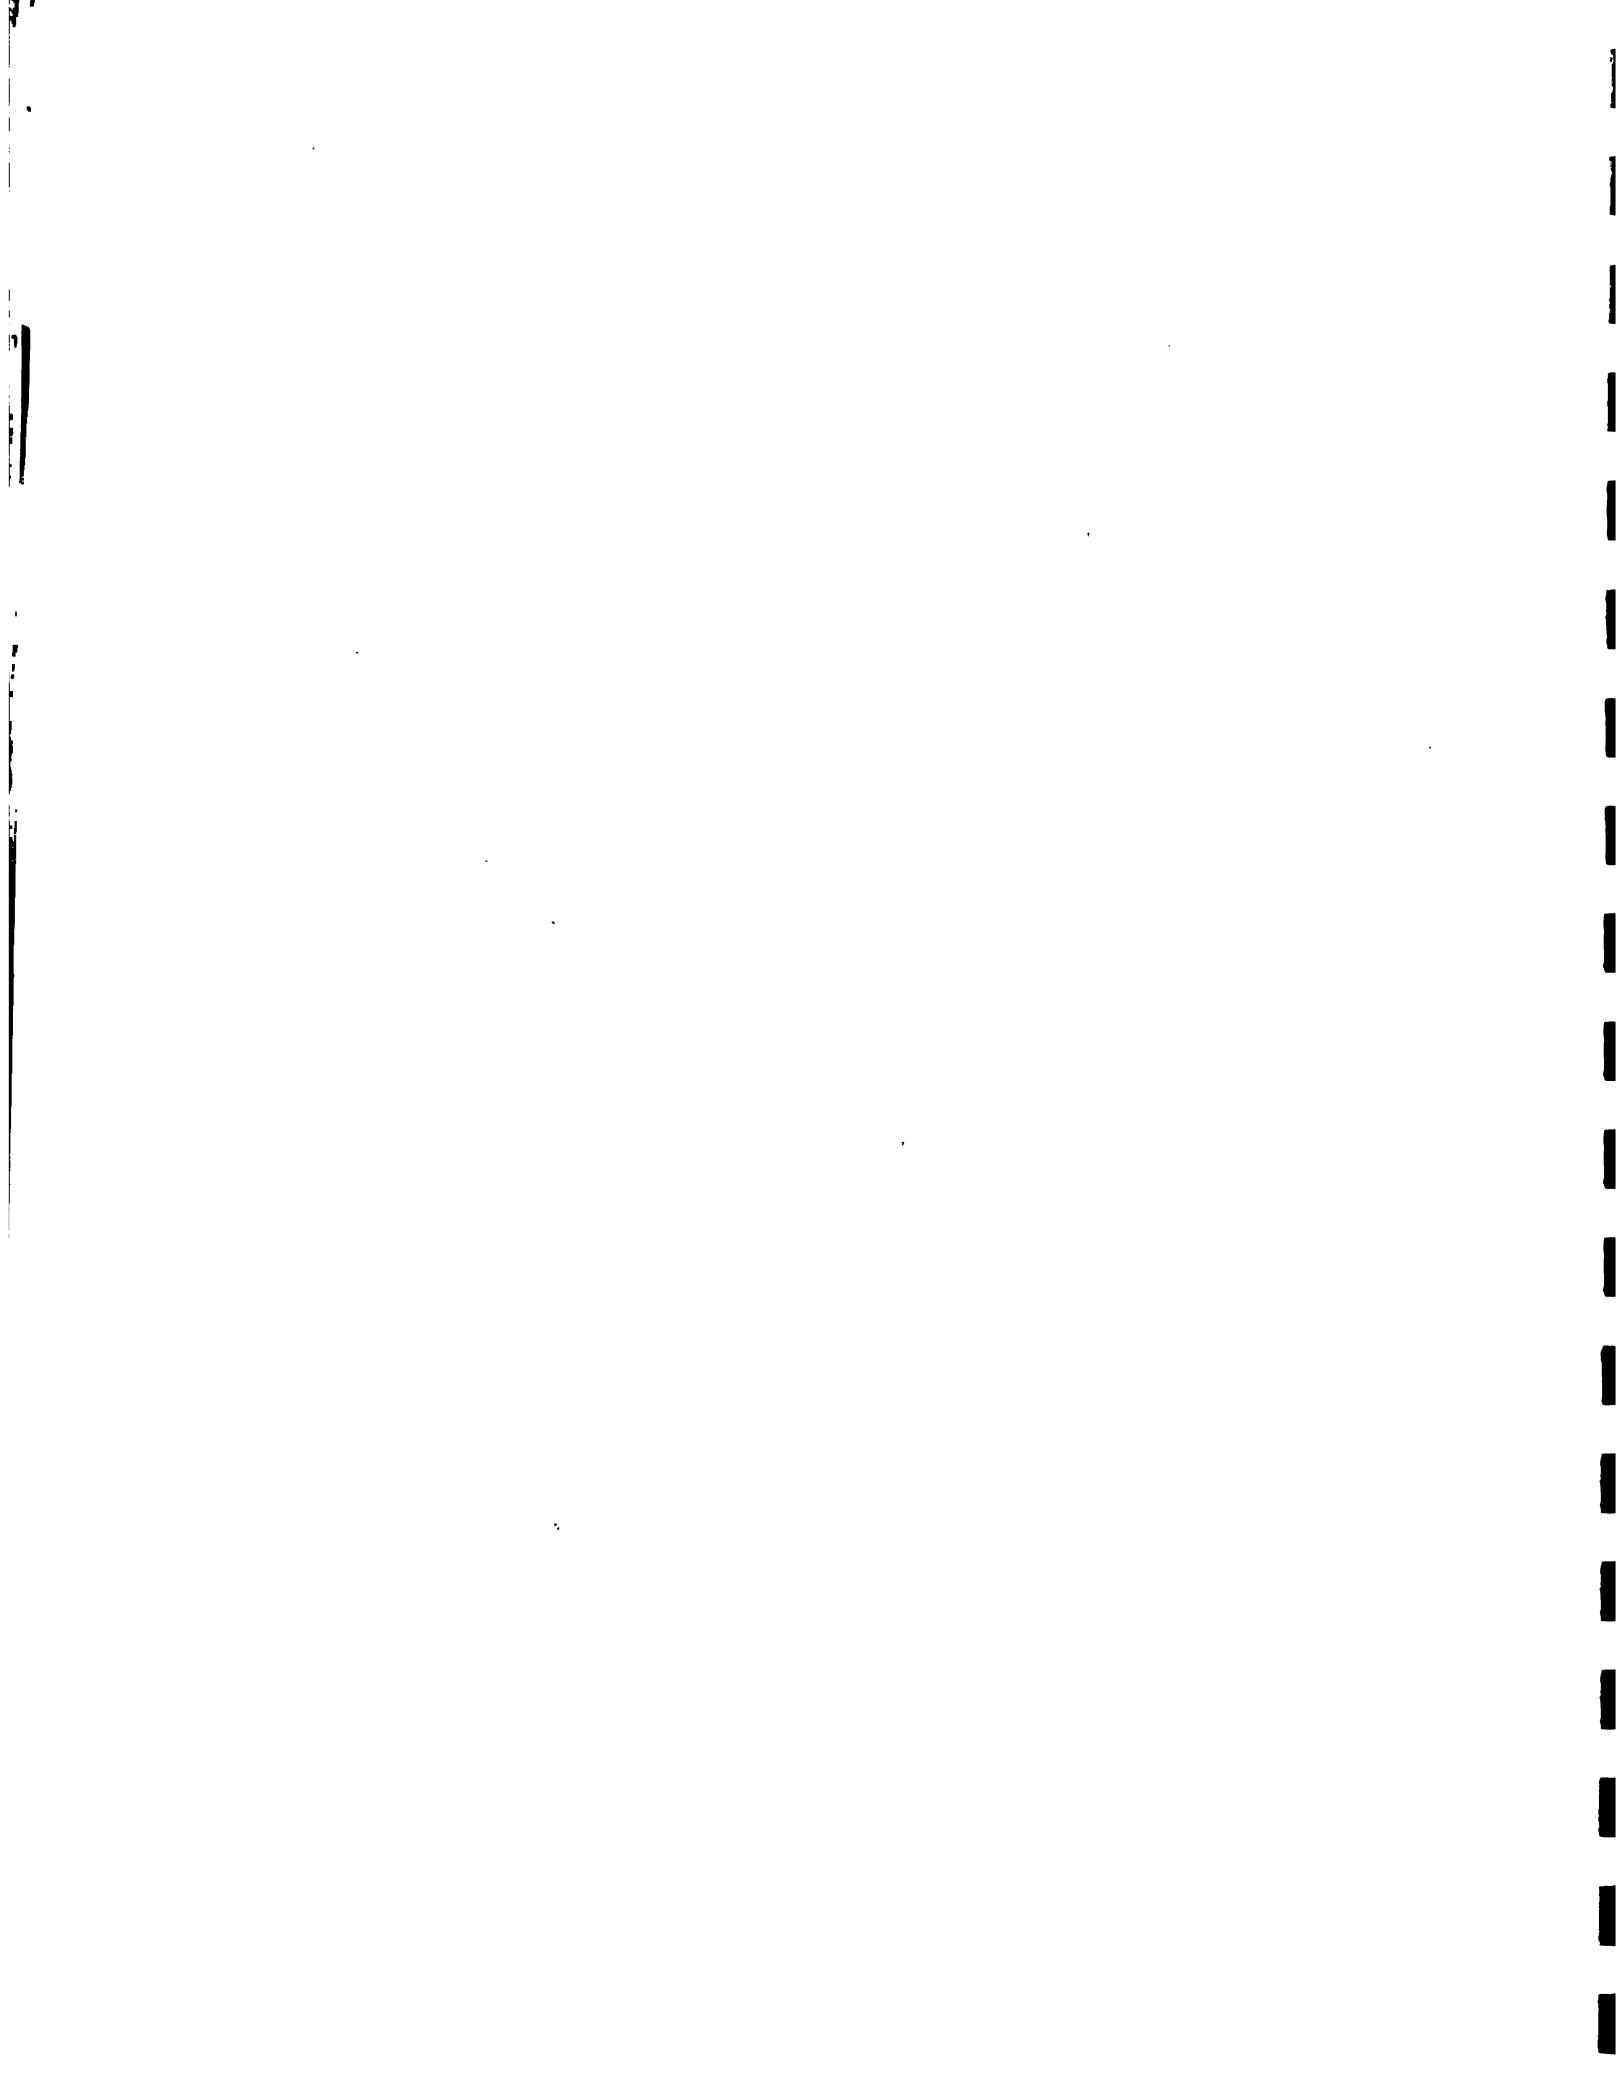

Effluent:

Treatment Plant

Livestock Receiving:

Hydraulic Ramps

Scales

2. PREFABRICATED BUILDING

The estimate includes the following costs in connection with the prefabricated building.

Labour	-	\$ 10,000.00
Duty	-	140,000.00
Rails	-	40,000.00
Epoxy Flooring	-	18,000.00
Ceramic Flooring	-	22,000.00
Roof Finish	-	65,000.00
Sundries	-	15,000.00
Substructure	-	90,000.00

		\$400,000.00
		=====

3. CURRENT PRICES

The estimate is based upon prices for materials and labour current during February, 1986. No allowance has been included for future factor cost increases.

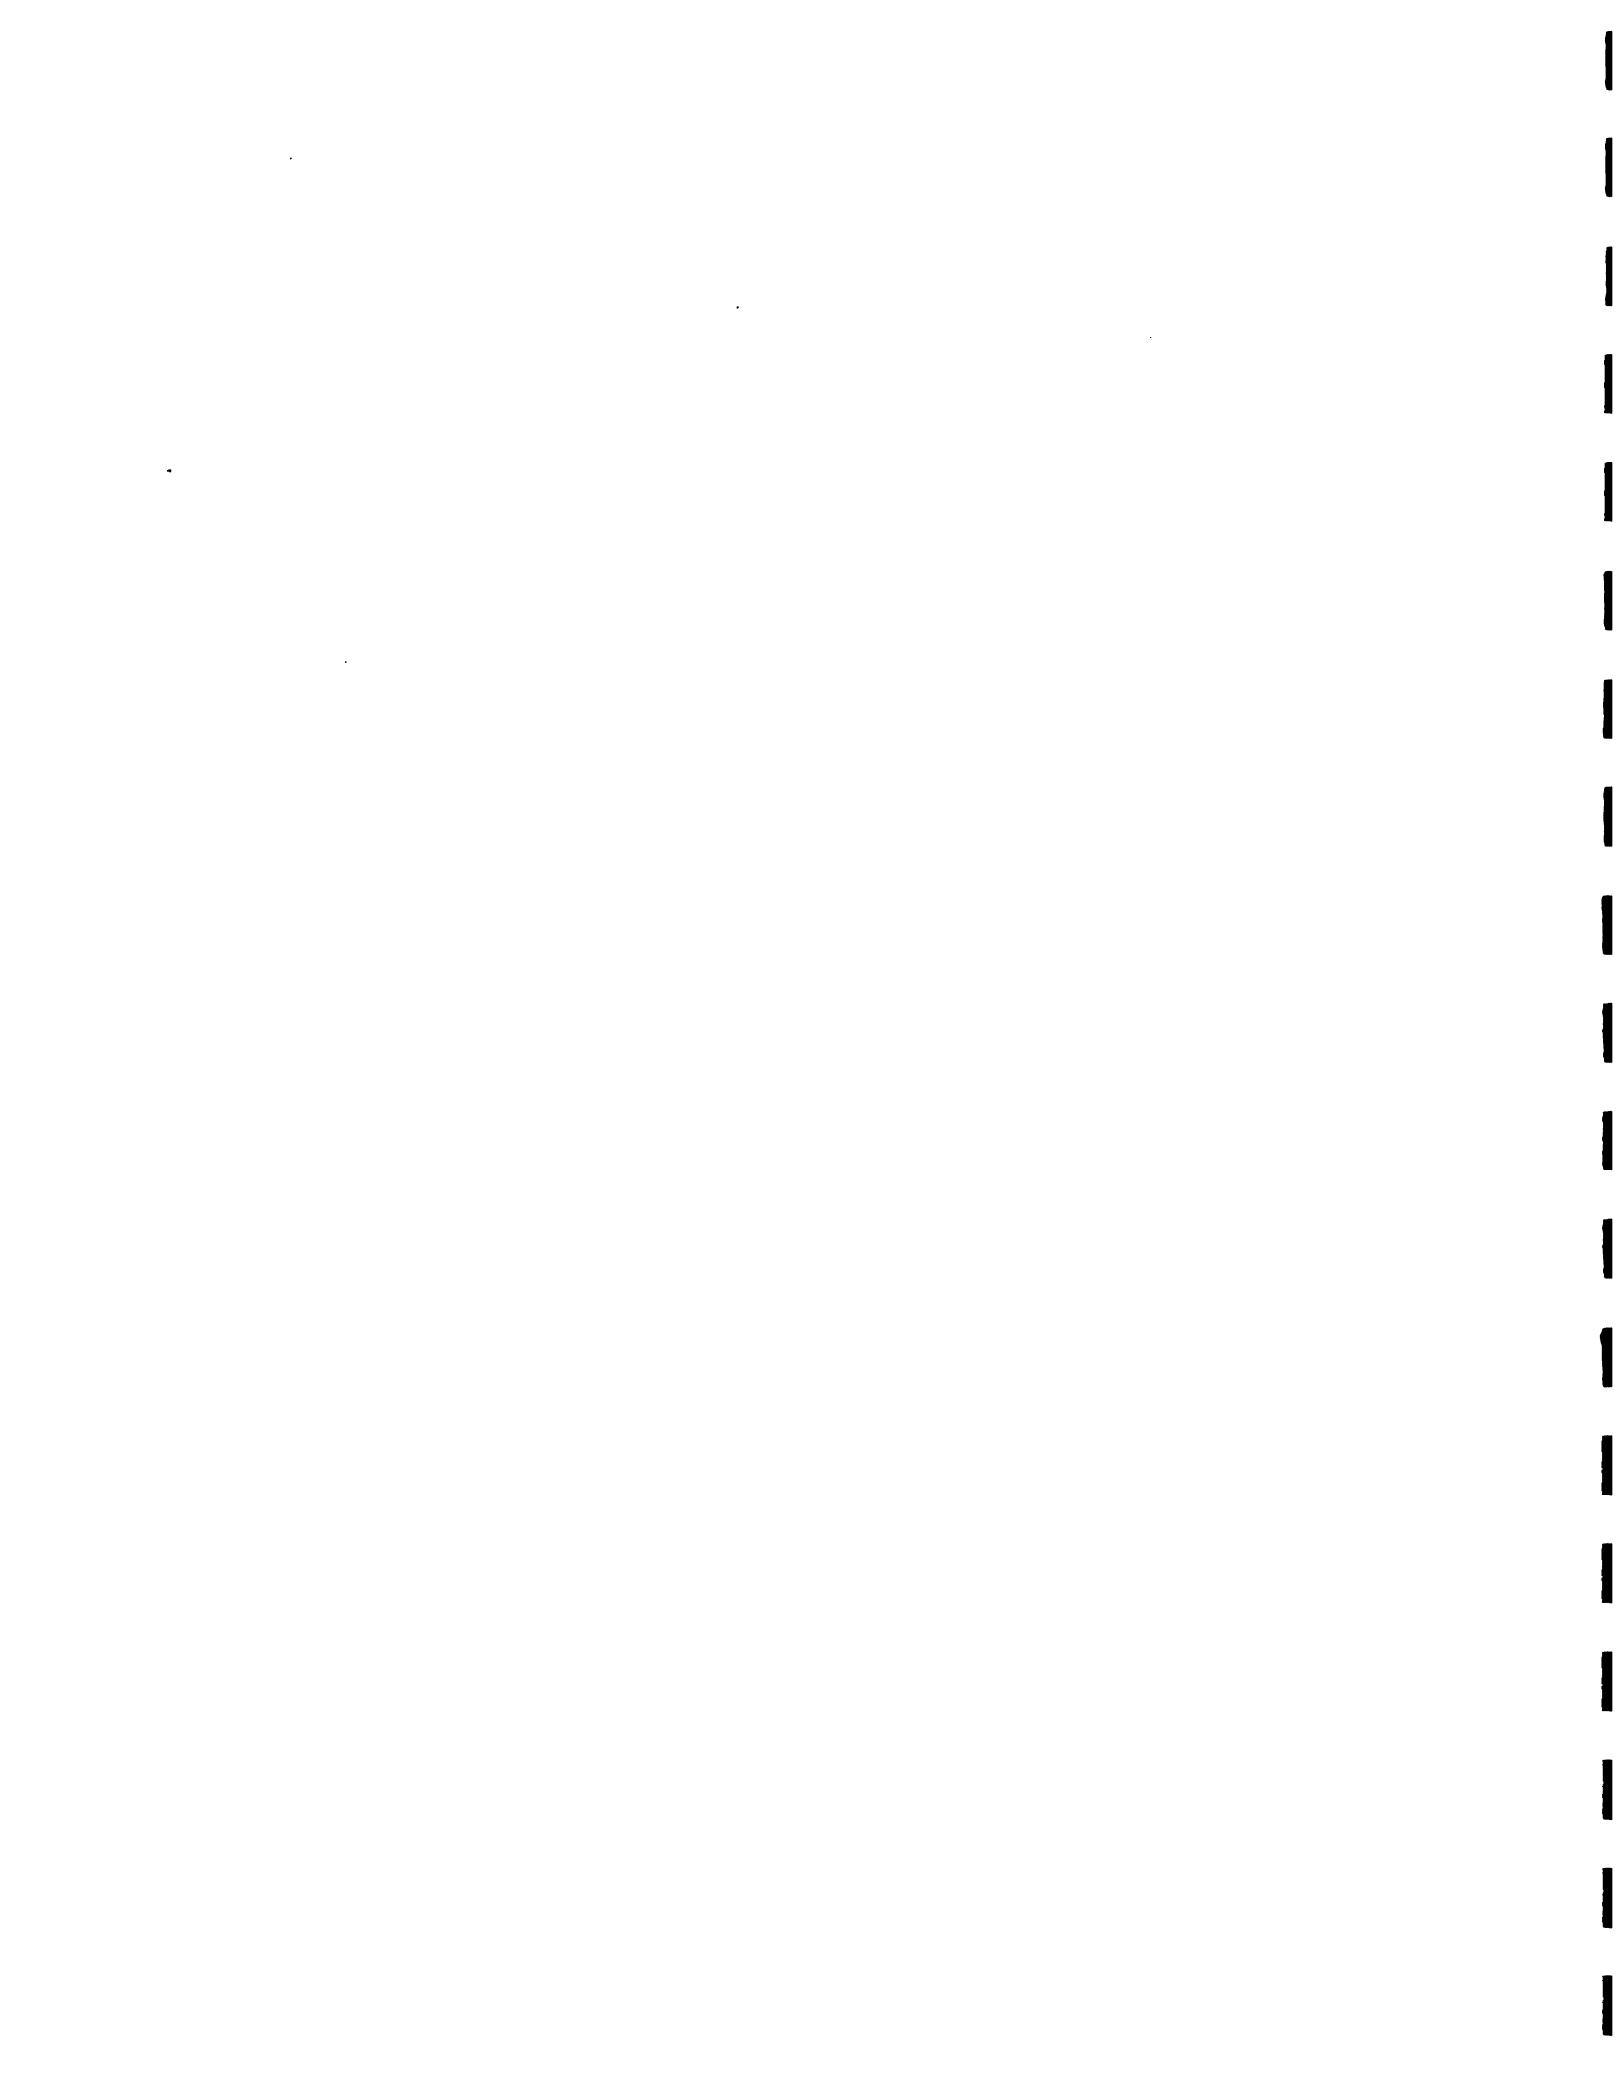

#

4. LEVEL OF ACTIVITY

The estimate includes no allowances for the effect which any change in the level of activity of the construction industry of Barbados may have on tender levels within the industry.

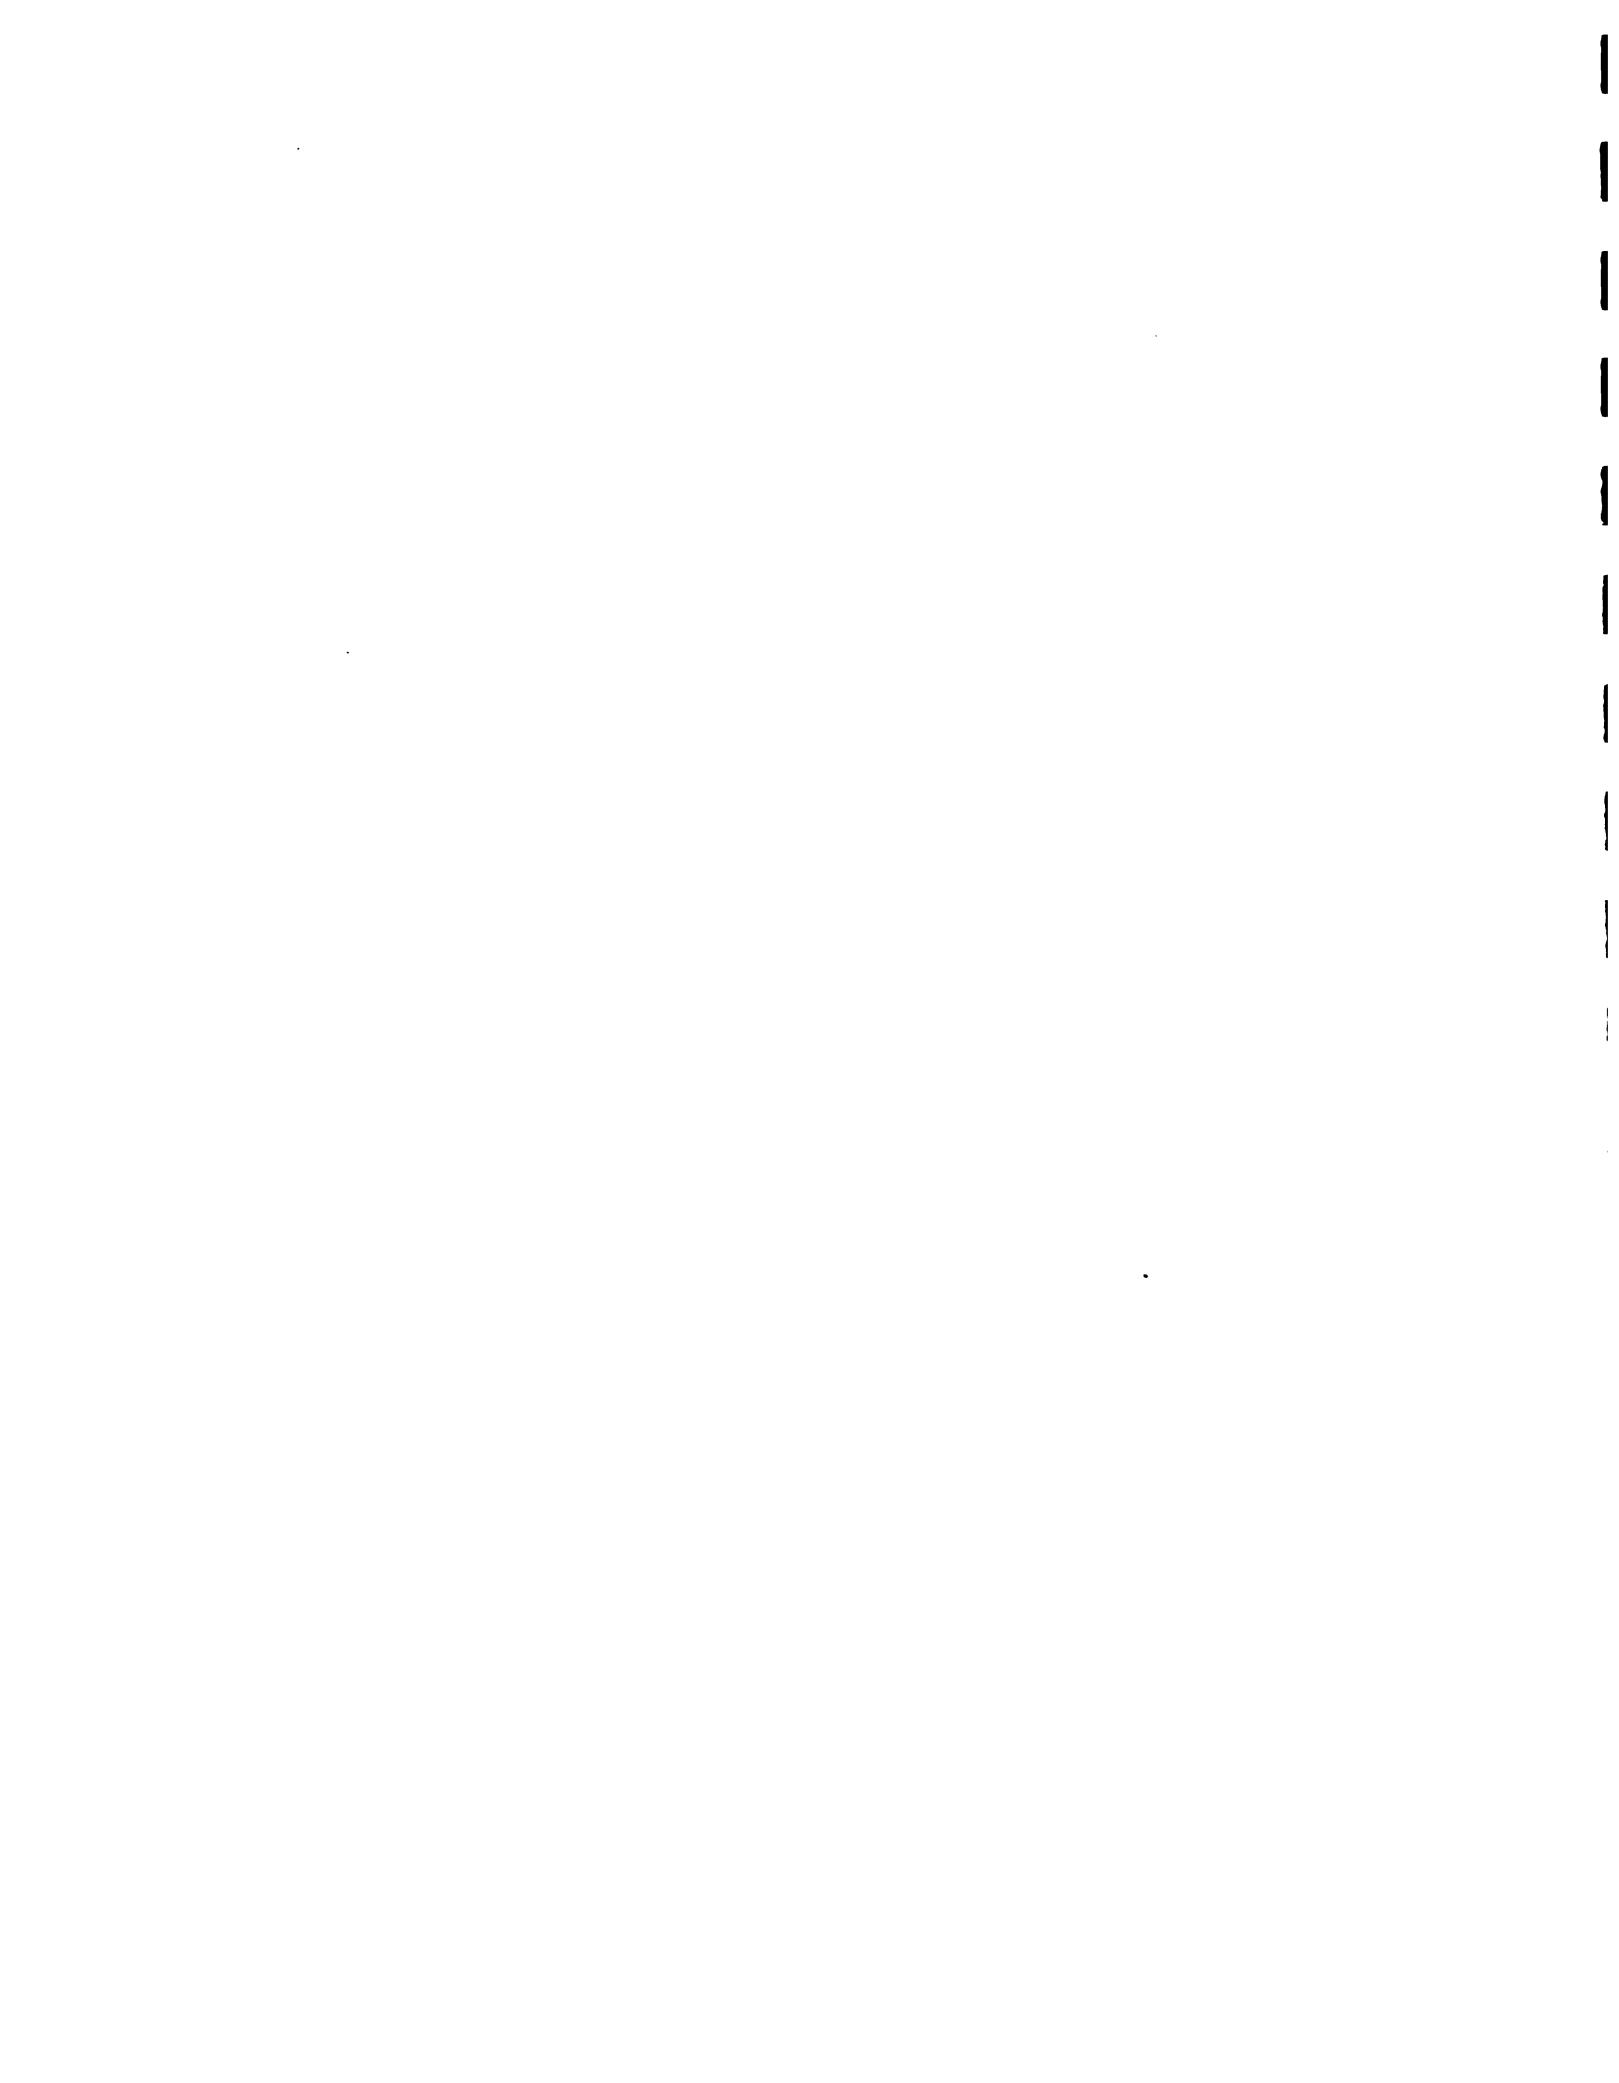

5. ACCURACY

Having regard to the information from which the estimate has been prepared it should be considered as a preliminary indication of the probable level of cost only at this time.

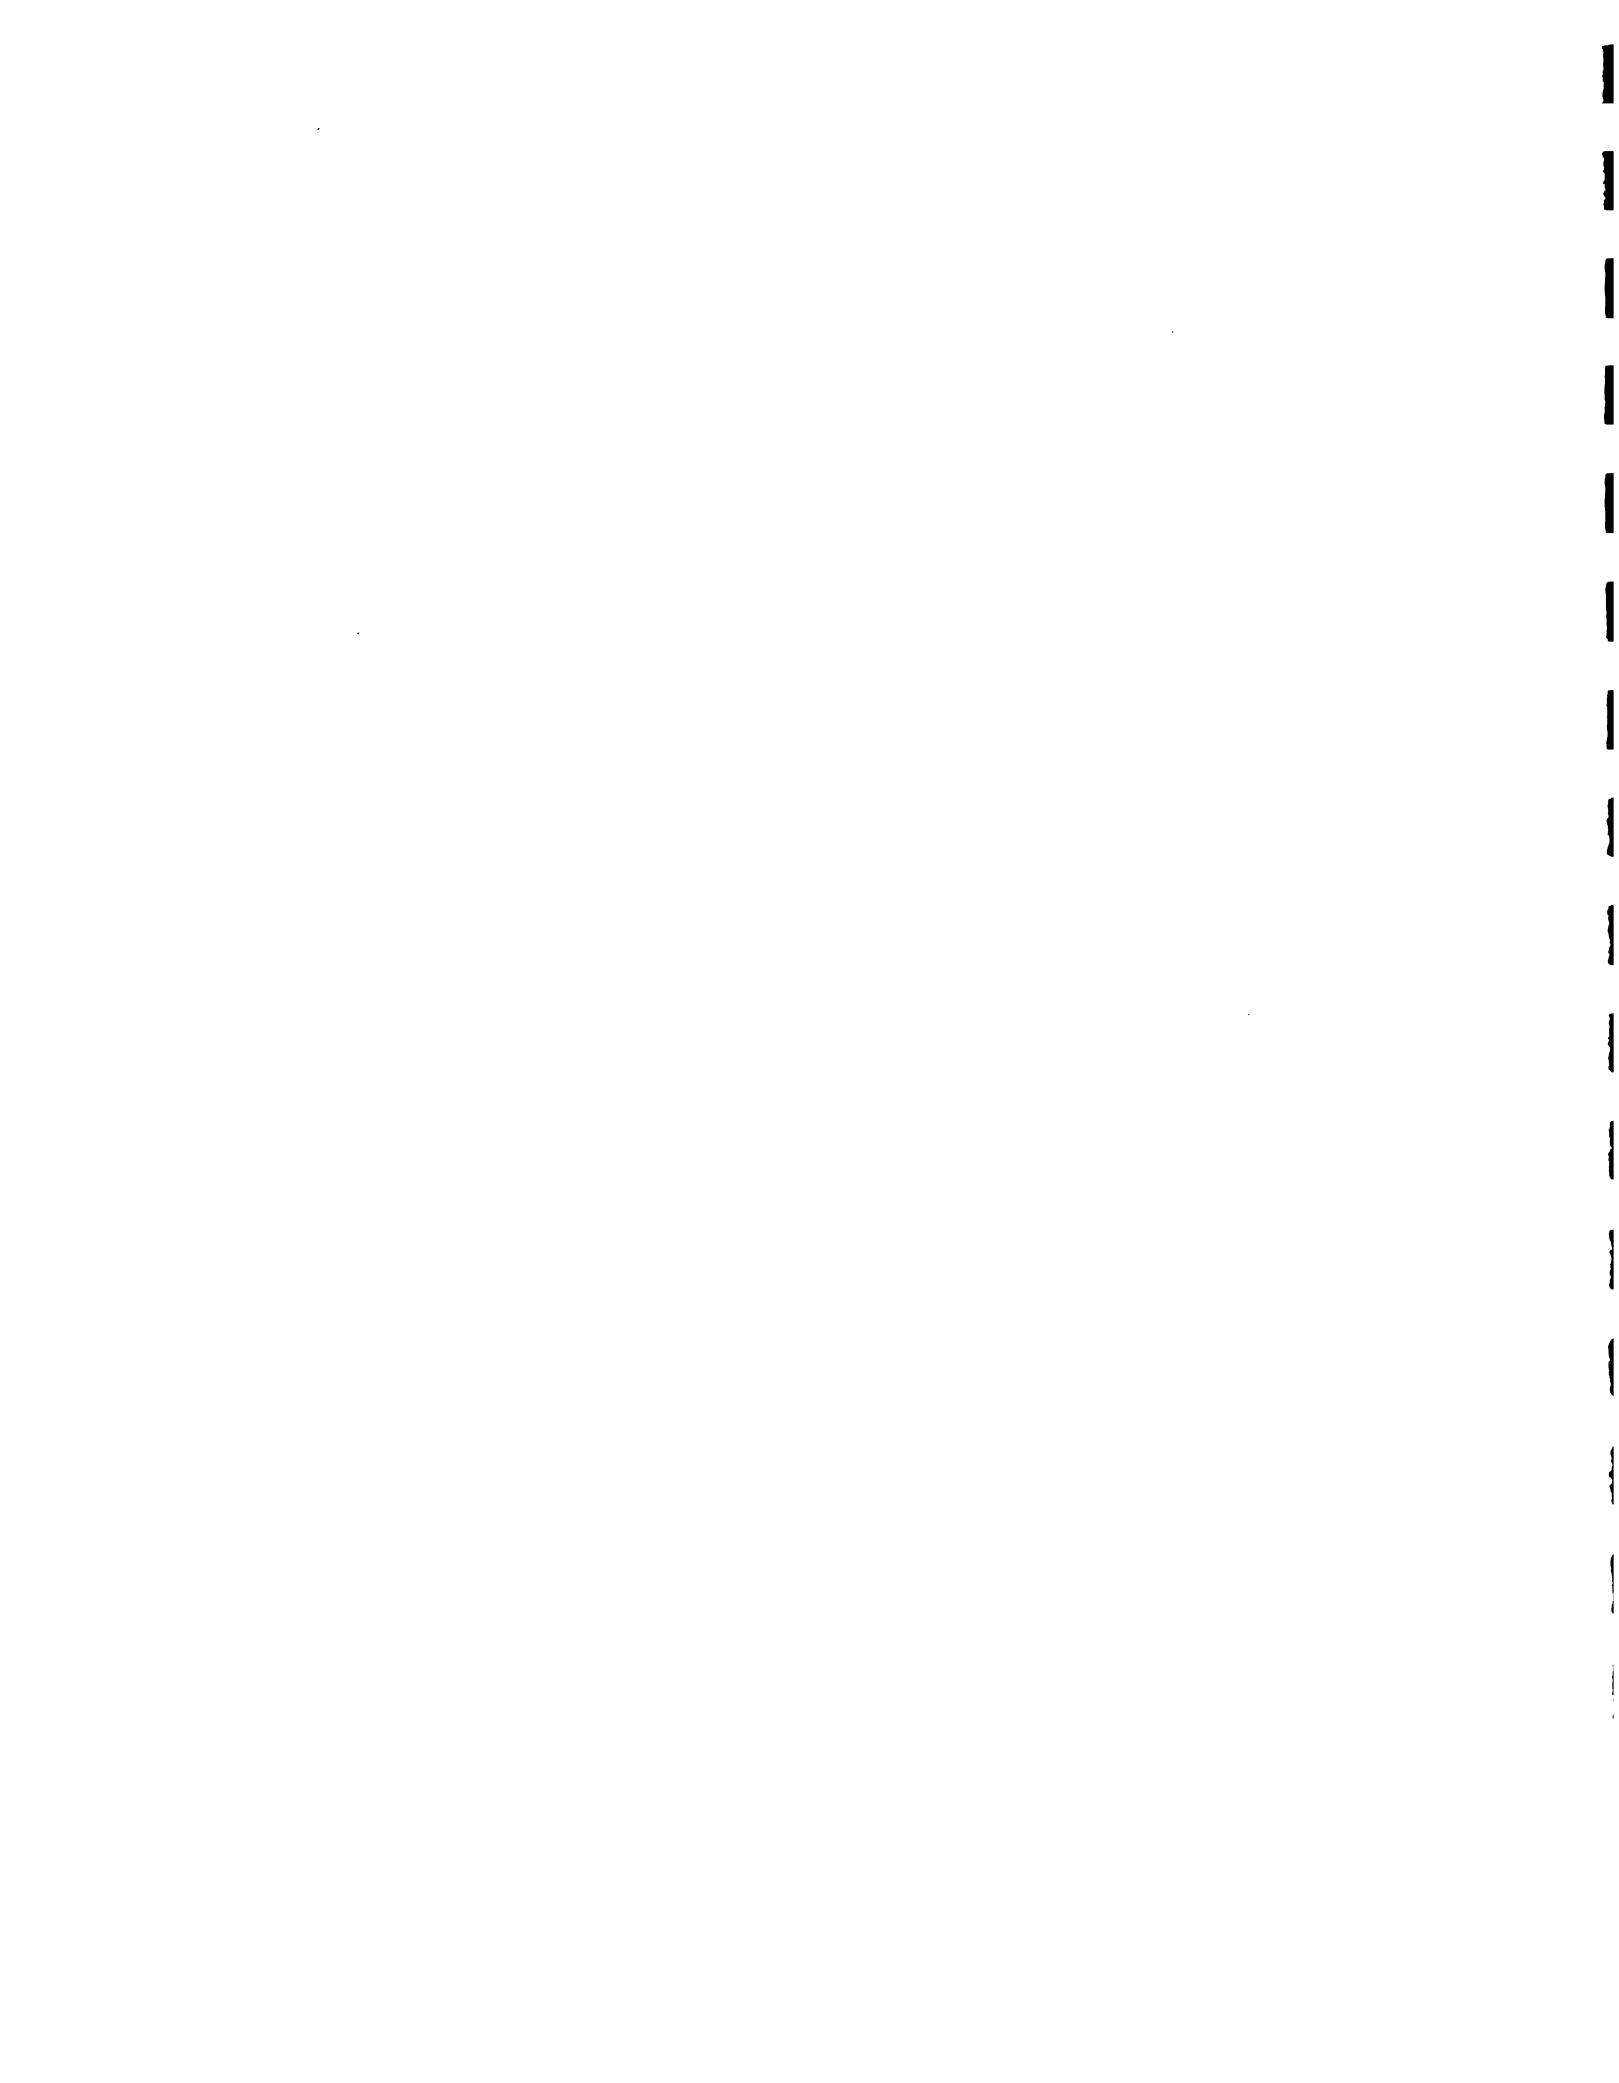

A. ABATTOIR EQUIPMENT

<u>QUANTITY</u>	<u>DESCRIPTION</u>	<u>COST U.S.\$</u>
1	4' X 7' livestock platform scale, suspended, with 1000 kg beam, in kg.	5520
3	Electric prods, PARMAK #64111 w/batteries	165
1	Cattle knocking box with head restrainer, mechanically operated.	4140
2	MATADOR 65 BC STUNNERS	531
-	Spare parts for Abattoir	276
5000	Rounds blank charges for Abattoir	431
1	Electric beef hoist	3450
1	Landing devisor	1242
1	Beef hoist for dropping cattle DEMAG 1000 kg.	1518
2	Beef cradles on wheels, strain. Steel (S.S.)	1242
1	Set wheels for "10"	131
1	Elevator platform for dropping, air-operator	1380
1	Beef hoist, DEMAG 1000 kg, 20 St/chain	1518
1	Beef saw, KENTMASTER #151, c/w counter weight	2518
1	Beef and hog splitting saw, KENTMASTER #75 complete with counter-weight	1776
-	Spare parts for beef and hog trolleys and manual scribe saw	345
1	Beef single rail lander, S.S. hooks	207
2	Beef spreaders, S.S.	165
1	Work bench for saw, two levels, pipe and angle iron frame with railing street surf galv after fab. 3' -4" X 2' -6" X 2' -6"	448

<u>QUANTITY</u>	<u>DESCRIPTION</u>	<u>COST U.S.\$</u>
1	Work bench for washing, two levels, pipe and angle frame, with rail grip street surface galvanise after fabrication 3' -4" X 2' 6 X 2' -6"	448
1	Rail Scale, 1000 kg with dial	2760
-	Beef bleeding rail 6" x 4" x 3/8 tube, 10" hangers, 1" x 2½" flat bar, support rods & bracing	483
4	Beef Shackles	634
600	7 lbs beef & hog trolleys, oilite bushings and stainless steel	6375
1	Manual Scribe Saw	127
2	Paunch trucks with pluck pan, all galvanise except Stainless Steel pan.	1255
-	Beef washing hose and nozzle	86
1	Head wash cabinet 30" X 30" X 5' -6", ½ Stainless Steel hook, 12 galvanise steel frame galvanise after fabrication 4" drain	703
10	White plastic blood pails. 20 l.	207
1	Head inspection table 30" X 30" X 28" high, tube frame, sanitary plastic top, two Stainless Steel ½" rod head supports galvanise after fabrication	493
1	Blood pail storage rack, galvanise after fabrication	172
-	Beef eviscerating rail, 4" X 4" X 1/8" tube, 10" hangers, 3/8" X 2½" flat bar, galvanise after fabrication 38 feet \$12.83 foot	483
1	Hog Bleeding Conveyor	10350
1	Hog Scalder	4140
1	Hog dehairer	8280
1	Hog gambrelling with bench and drop chute, galvanise after fabrication	828

<u>QUANTITY</u>	<u>DESCRIPTION</u>	<u>COST U.S.\$</u>
1	Hog head stationary hair singering	396
1	Hog scraping bench, 6' -0" X 2' -6". 2 level pipe and angle frame with guard rail, grip strut surface galvanise after fabrication	621
-	Hog eviscerating rail 4" X 4" X 1/8" tube, 10" hangers 3/8" X 2½", flat bar, galvanise, after fabrication 68 feet @ C \$8.60/ft.	872
300	gambrels galvanized @ \$5.82	1656
4	"o" rings for trolleys, stainless steel	260
1	Rail scale (Hog & small stock) 1000 Kg with dial	2760
1	Electric hoist, 500 Kg, DEMAG complete with I-beam trolley and controls (for small stock)	1293
1	I-beam for electric hoist	345
1	Skinning rack, galv. after fabrication with Stainless Steel hook	552
-	Small stock eviscerating rail, 4" X 4" X 1/8" tube 10" hangers, 3/8" X 2½" flat bar, galv. after fabrication complete with hangers and braces 20 Lt 12.83 \$/Lt	256
25	Small stocks hanging trees, Stainless Steel hooks	862
3	Stainless Steel lavatories with Knee operation	1097
4	knife sterilizers Stainless Steel; 3/4" drain, 4" X 10" X 10"	483
6	Hog scraper 13.80	82
1	Hand scraper 25.000 btu	310
1	High Pressure washing machine	2967
1	tumbler for trolleys	1380
2	Clean-up ½ Ø hoses 50 Lt with quick couple and nozzle	151
1	Viscera and paunch inspection table and chutes 30" X 5' -0", Stainless Steel top, galv. pipe frame	586

<u>QUANTITY</u>	<u>DESCRIPTION</u>	<u>COST U.S.\$</u>
1	Stomach opening table, chute and screw conveyor, 3' -4" X 3' -4" X 3' -4", stainless steel top, 18" X 3' -4" chute with grate, 8' X 8" Ø screw conveyor and drive.	1380
1	Viscera cleaning table 10' X 3' -4" X 2' -6" Stainless Steel top, pipe legs galv., 3 rigid pipes, 1½" Ø drain inserter	1104
1	Umbrella-type tripe washer, Stainless Steel 54" Ø X 4'-0" high	1000
-	Hog, small stock and beef cooler rails including supporting structural steel frame, 4" X 4" X 1/8" tubing, hangers, 3/8" X 2½" railing, switches, etc. galv. after fab. 800 Lt 14.49 \$/Lt.	11592
	Hog small stock and beef railing in boning room and one dock including tubing langers railing, switches, supports and bracing galv. after fabric. 70 Lt 18.60 /Lt.	897
2	Toledo bench scale 150 Kgs. cap. in 0.25 Kg. divisions dial	2208
2	Scale benches galv. after Lab.	138
2	Boning and Cutting tables, Stainless Steel top with cutting board, 10' -0" X 42" X 34" high adjust legs, 10" back 14 ga Stainless Steel type 304	1587
4	Liver hanging trucks, 60" X 30", No Stainless Steel Hooks 2 - 10" Ø wheels and 2 -6" Ø swivel wheels galv. frame	3919
4	Stainless steel frame shelf trucks, 6 levels 27" X 20" X 57" high. Capacity 800 lbs., 5" Ø wheels	897
24	Nylon pans for \$65, 15½" X 26½ X 5" deep	331
100	Cutting, skinning and boning knives	966
10	Sheels	186
20	Knives holders	138
1	Rotary stone knife sharpener	690
1	All purpose truck, 45" X 22", 9" bed height, 35" handle heigy, galvanized	172

<u>QUANTITY</u>	<u>DESCRIPTION</u>	<u>COSTO U.S.\$</u>
2	Drum trucks	56
6	Square garbage receptacles @ \$31.05	186

NOTES ON ENVIRONMENTAL IMPACT OF ABATTOIR

1. General Remarks

Abattoirs, if not properly designed and operated, may be the cause of atmospheric pollution as well as pollution of the surface or underground water in the immediate area of the plant.

Atmospheric pollution is generally due to improper or inadequate sanitation procedure which permits the decomposition of animal by products or residues. Care in keeping the plant and it's environment clean and free of decomposing materials will produce satisfactory results in this area.

On the other hand, protecting against pollution of the water resources requires not only alertness and care but also proper equipment to remove from the effluent stream the pollutants which, otherwise, could cause considerable damage to the environment.

The quality of the effluent stream returned to the environment can be influenced in two ways by the planners, namely,

- a. by eliminating, when possible, from the effluent stream certain pollutants that would otherwise prove to be particularly detrimental and difficult to eliminate at a later stage. This applies particularly to blood and scraps of animal tissue.
- b. By installing a sewerage treatment system that will reduce the pollutants contained in the effluent to an acceptable level.

We will treat each one of these factors individually detailing to some degree what we feel should be done to avert any detrimental effect to the environment of Barbados.

2. Characteristics of the Plant Sewerage Systems

The abattoir will have three different sewer systems, namely,

- a. a rainwater system which, through roof gutters and surface drainage will return the water to the environment without further treatment,
- b. a sanitary system which will pick up all toilets, washroom drains and washbasins and direct the stream to a septic tank and underground absorption field of approved design;
- c. a plant system which will pick-up all contaminated water from plant operating areas such as killing floors, inedible department, viscera process rooms, coolers and meat processing departments. This third system is the one that interests us particularly.

To reduce the load of pollutants in the water stream of the plant system we propose:

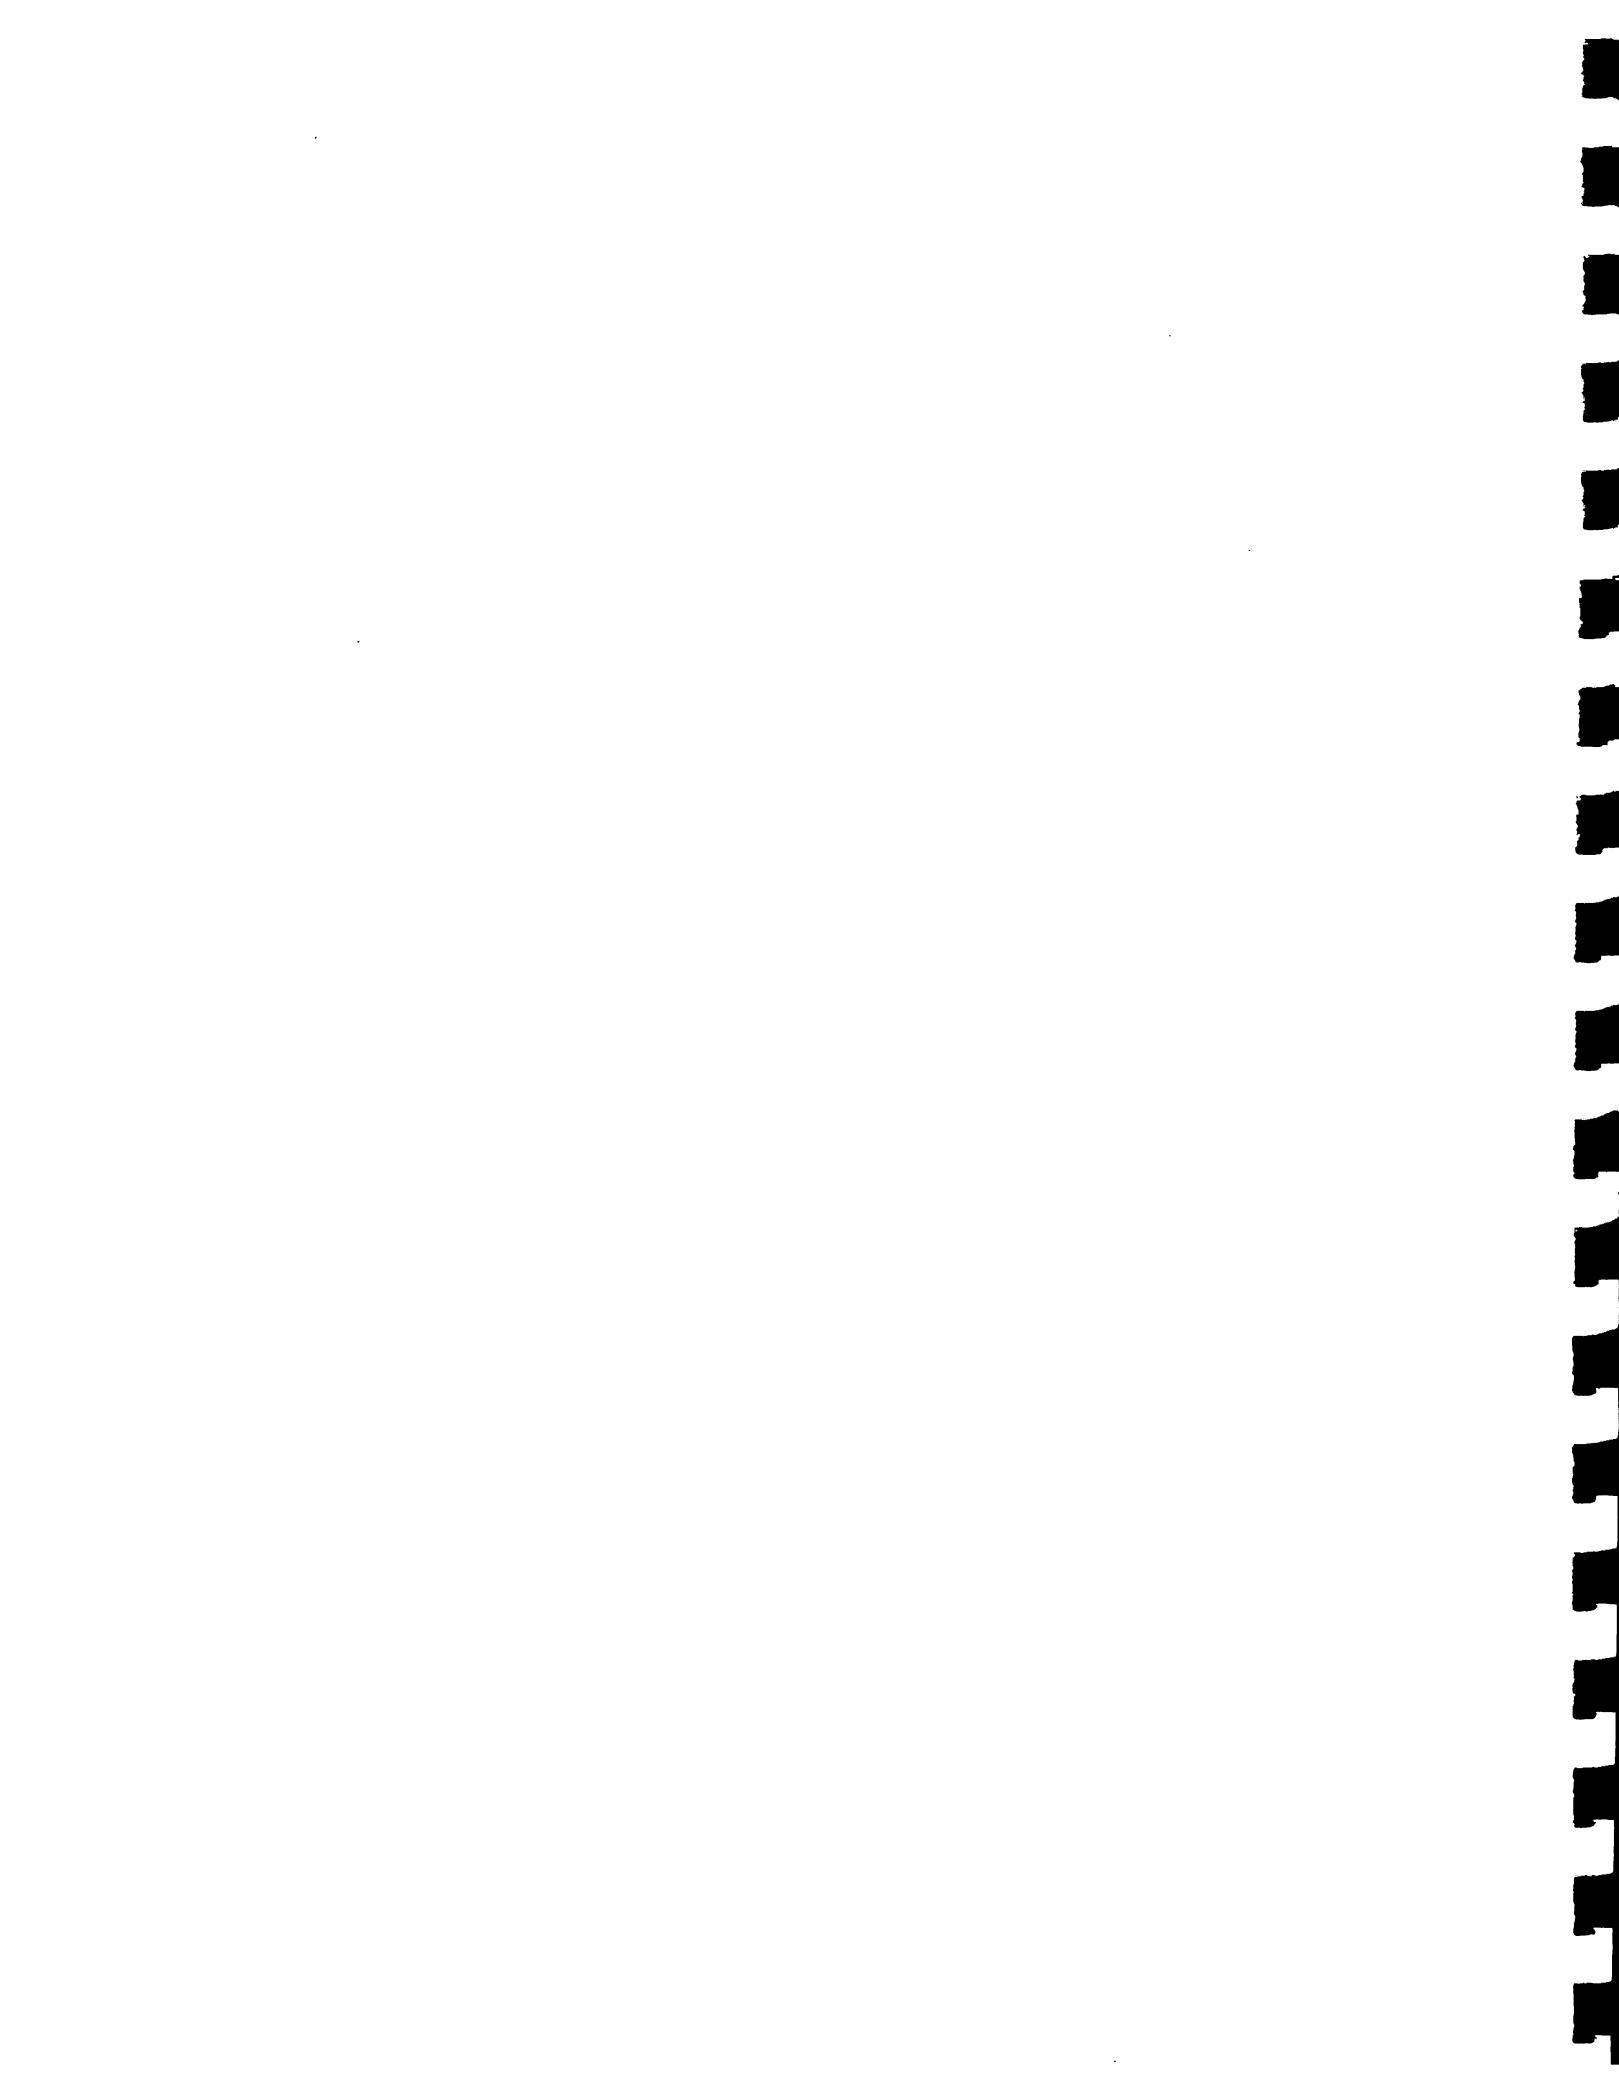

- a. to keep all the blood that we can out of the sewer system. Thus the blood will be picked up and transported to the rendering plant where it will be dried and sold as concentrated protein for animal feed,
- b. by making use of proper drains to intercept as much as possible of the meat scraps that would otherwise increase the pollutant load of the effluent stream.

We thus believe that with proper planning and operation of the plant, we should obtain a plant effluent having the following characteristics:

Greases and fats	350 - 800 p.p.m.
BOD 5	500 - 1200 p.p.m.
Solids in suspension	200 - 400 p.p.m.

Based on a production schedule of

- 40 cattle, one day per week
- 288 hogs, two days per week and
- 160 lambs and sheep, two days per week,

We have calculated the plant water volume at

- 60 m^3 per day maximum, and
- 36 m^3 per day average.

3. Norms of the Ministry of Tourism and the Environment

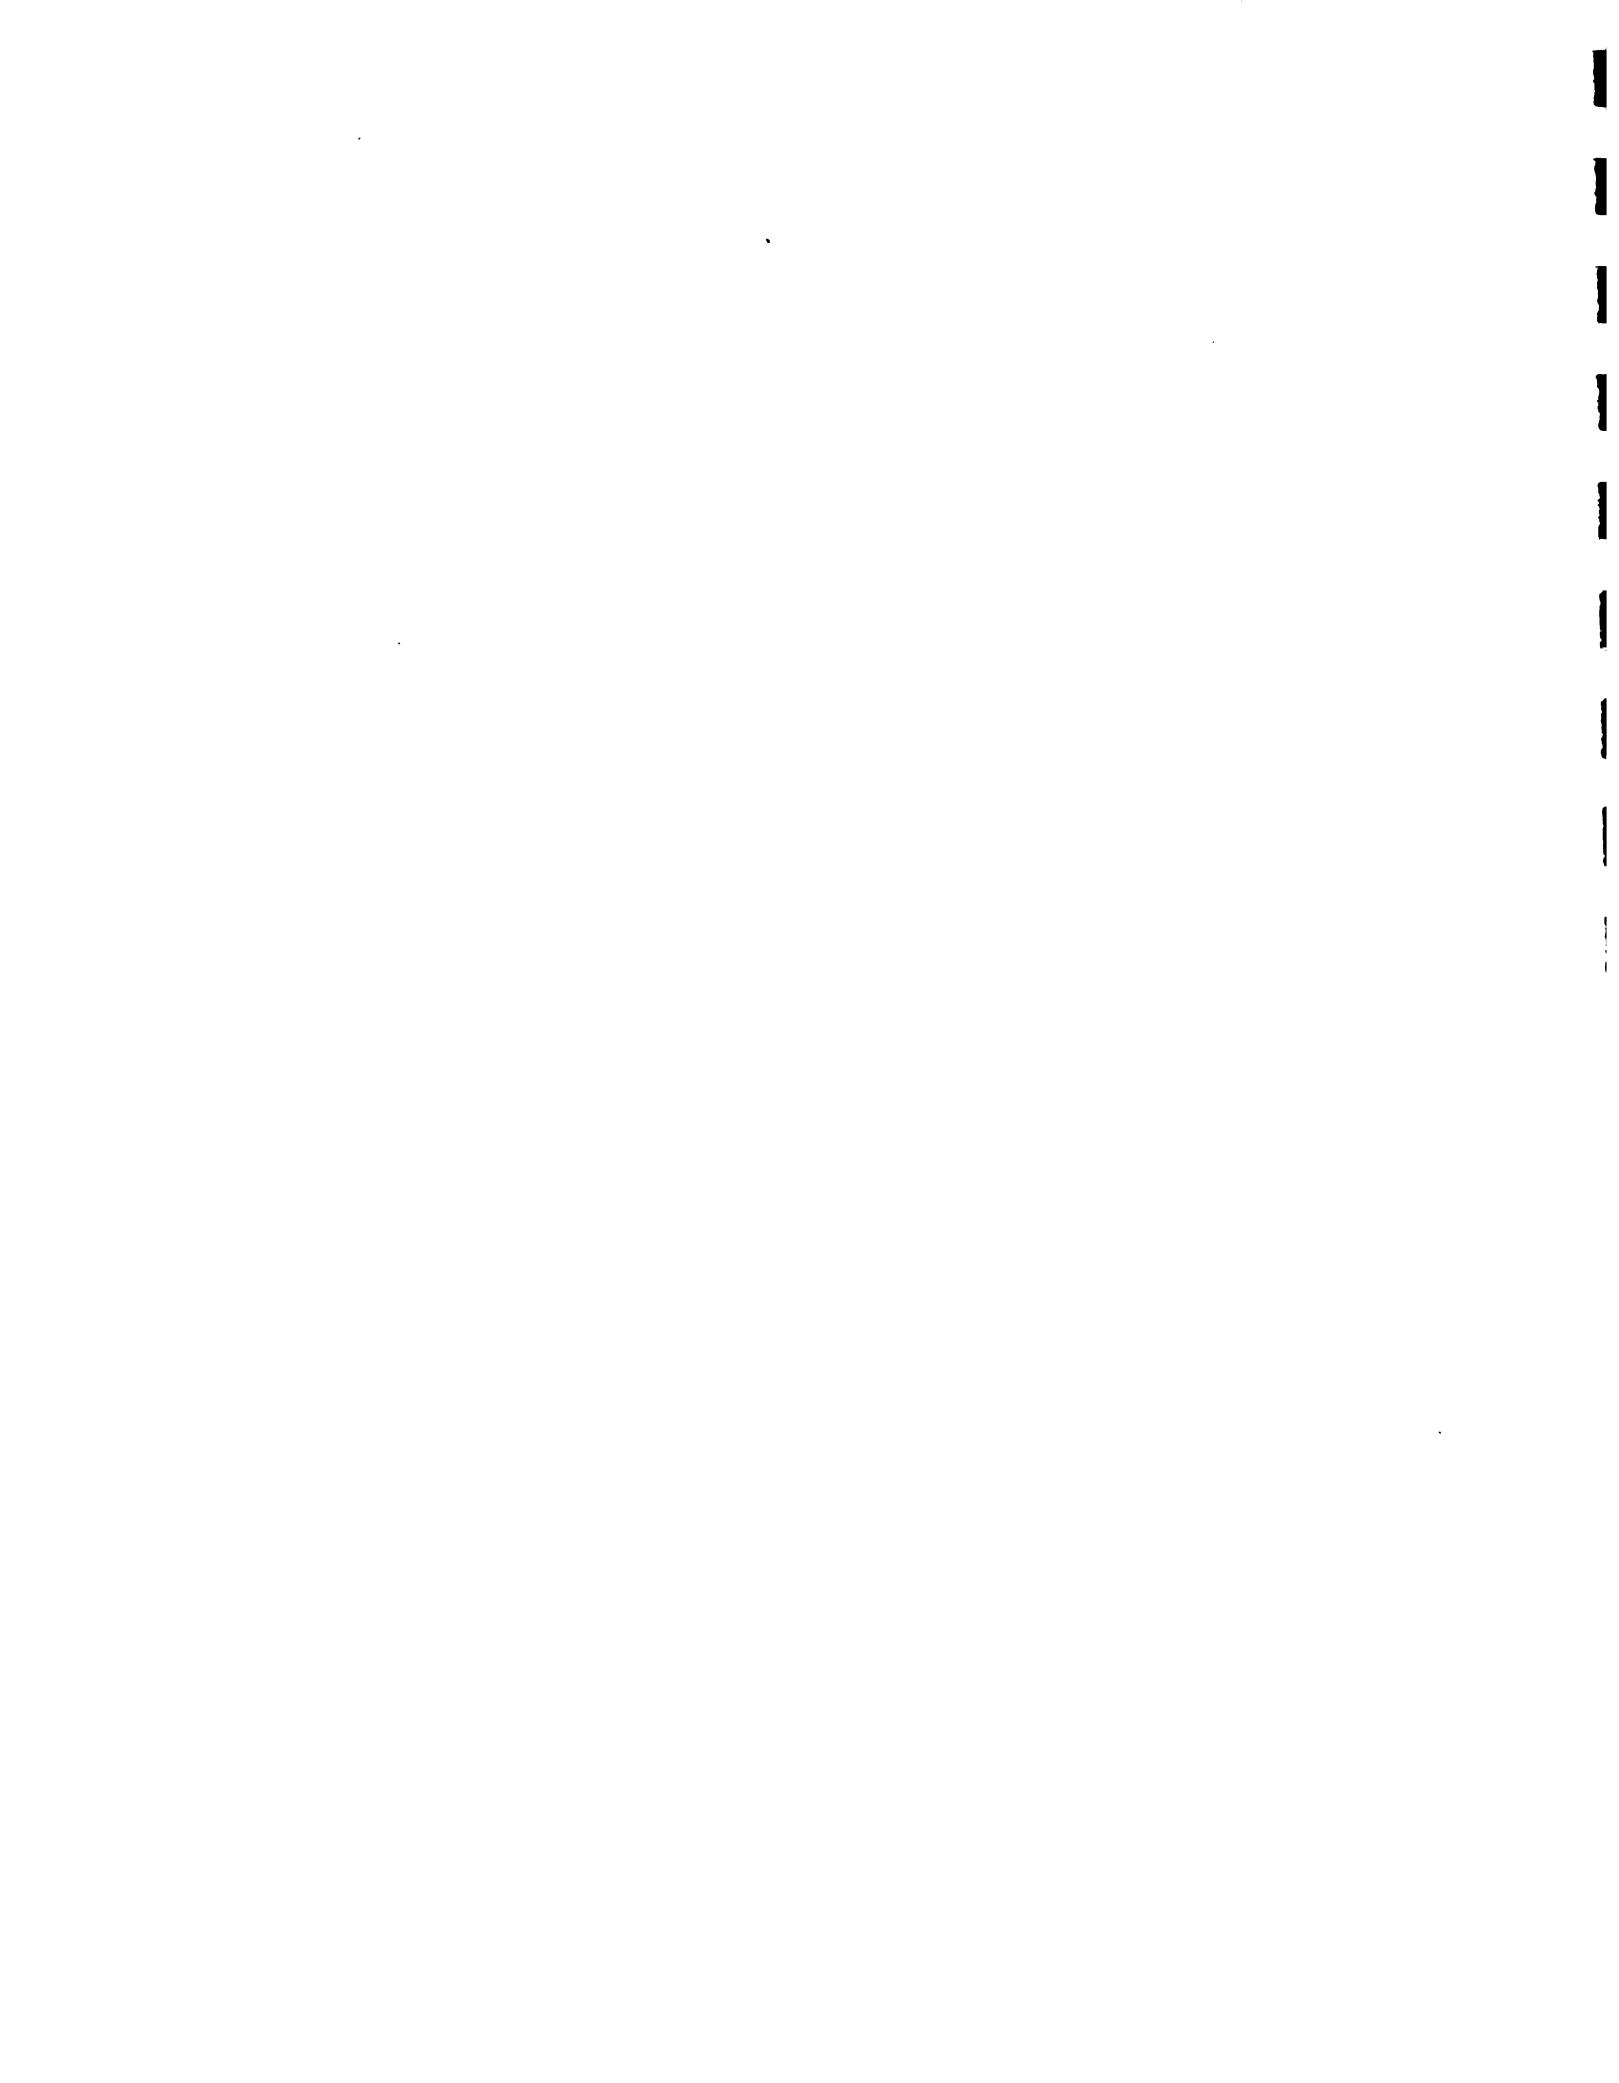

Mr. Wilton Conliffe, Senior Environmental Engineer of the above ministry expressed the opinion that we would be allowed an effluent BOD 5 load, in the effluent from the sewerage treatment plant, equivalent to the load that would be produced if the land was occupied by a residential development. The norms applicable in this case, for comparison purposes, would be the following:

- 10,000 sq. ft. lots
- 5 persons/lot
- 60 gals./day/person
- use of septic tank
- influent load BOD 5 - 200 p.p.m.
- output load BOD 5 - 100 p.p.m.

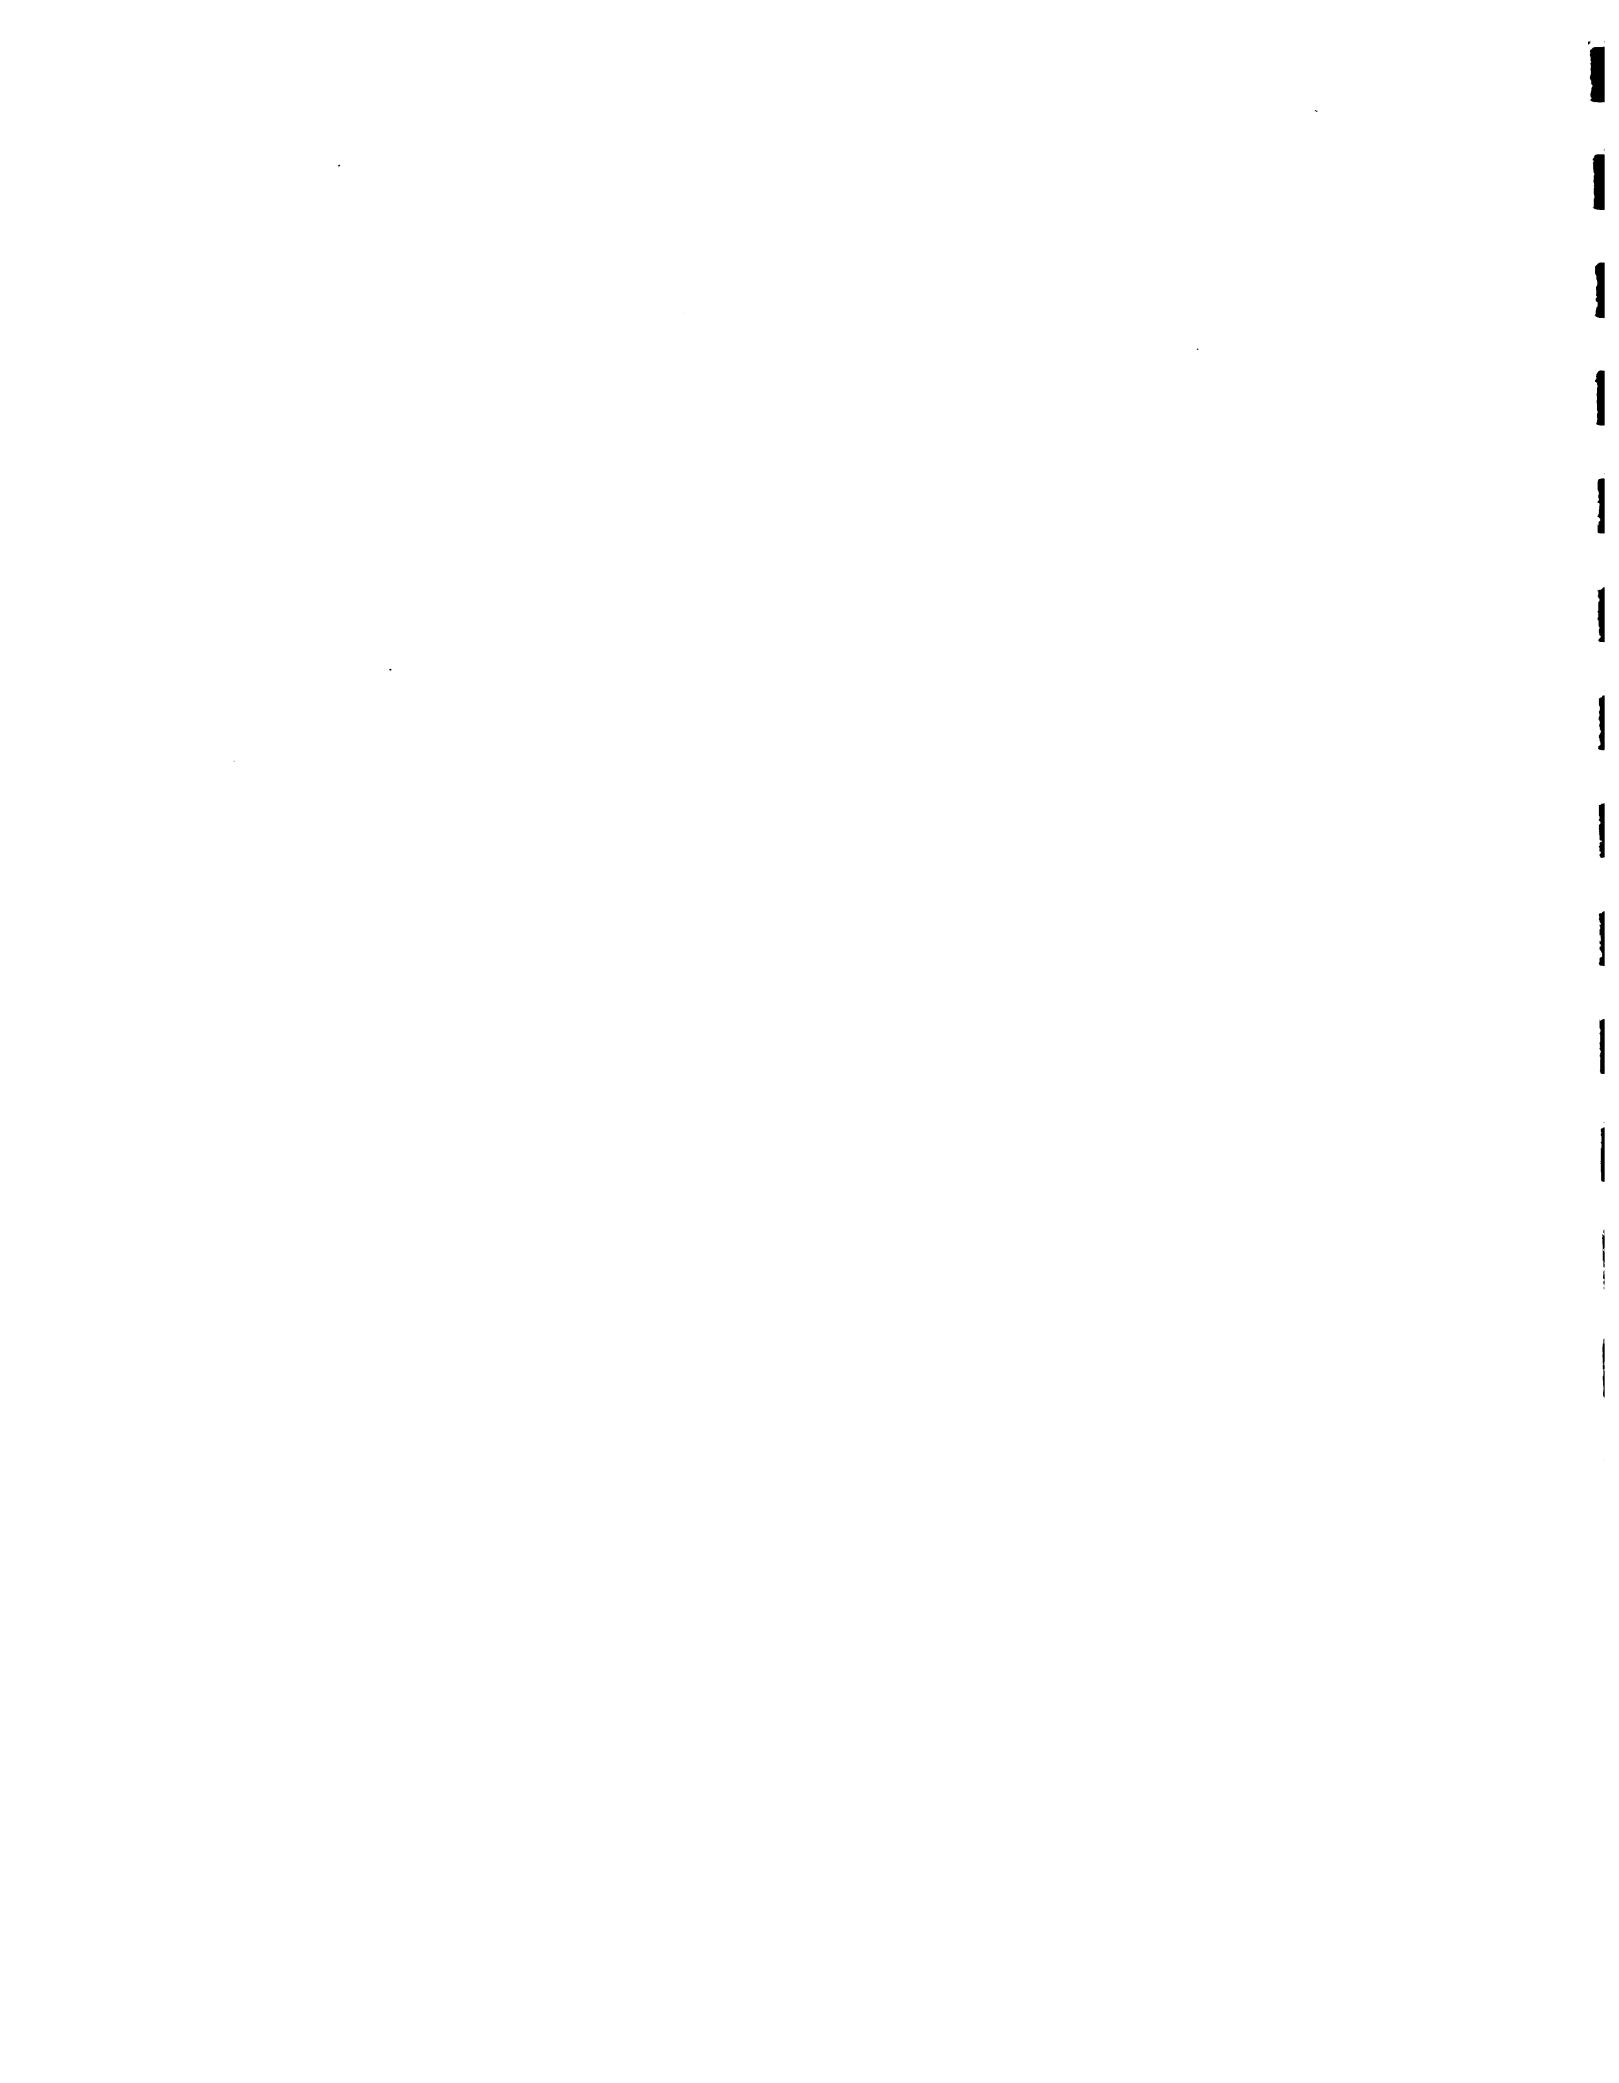

4. Proposed Sewerage Treatment Plant

We propose the use of the following plant:

- Manufacturer: NIJHUIS, Holland
- The plant involves primary and secondary treatment and, for the volume given earlier, would fit in a building measuring approximately 6 m x 8 m x 3,5 m high.
- The first stage is a self-cleaning rotary filter having a capacity of 6 cubic meters per hour.
- The effluent is then pumped through an accelerated flotation system using chemical additives which can be ferric chlorides or poly-electrolite flocculents.

- Reduction of contaminants will be as follows:
 - . Reduction of BOD 5 - 75 - 80%
 - . Reduction of suspended solids 85 - 95%
 - . Reduction of fats and greases 90%
 - . PH unaffected
- A preliminary calculation indicates that the pollution level of the effluent stream coming from the sewerage treatment plant would, under the norms given earlier, be about equal to a 10 acre plot converted to residential use.
