### **PRESENTATION**

### **INTRODUCCION**

### **SUMMARY CONTAIN**

*Structure and growth of exports 1983-1995*

*Structure and growth of imports 1983-1995*

*Monthly export calendar to USA, 1994-1996 and relative performance indicators*

*Performance of agricultural exports July 1993-June 1997*

### **PART Ix**

*Structure and growth of agricultural exports. 1983-1995*

### **PART II**

*Structure and growth of agricultural imports. 1983-1995*

### **PART II**

*Distribution of exports between the western hemisphere, the ECC and Asia, 1986-1995*

### **PART III**

*Monthly export calendar to the USA by product and group, 1994-1996 and relative performance indicators*

### **PART IV**

*Performance of agricultural exports to the United States of America, July 1993-June 1997*

## ***PRESENTATION***

**T**he purpose of the Statistical Basebook is to provide data and analysis prepared and presented in a manner that makes it useful to a wide variety of users as a reference on agriculture in the Americas. This is the first version of the first volume. Trade was selected as the topic for the first volume due to the current interest in the more open trading environment and the intense interest and need for information on trade and markets which is expressed by almost everyone connected with agriculture. The way in which the information is presented makes it available and useful to a broad range of users, as well as attending to different

This volume was prepared by the Technical Management Unit (TMU) of IICA, under its line of work "Situation and Outlook for Agriculture." Other volumes of the basebook are planned. These would cover production, consumption, prices, resources and inputs, technology and macro-economic links.

The focus of the Basebook is the Western Hemisphere (WHM), the countries and regions within it. However each volume will link or provide some comparative analysis which places the Hemisphere in context. In this trade volume, comparative indicators show how the WHM compares to the world. Also, one whole set of tables summarizes the agricultural trading links between the WHM and the other principal agriculture and food importing regions of the world.

Much of the information included in this publication will be available on IICA's Internet site @agriforo ([HTTP://agriforo.lica.ac.cr](http://agriforo.lica.ac.cr)) which has been designed and run by staff of the TMU as a means of exchanging information with cooperating institutions within the Hemisphere, of providing web services and home pages for several institutions which have cooperative agreements with the TMU for the provision of technical assistance, of providing the basis for developing rural information systems and electronic farm markets and as a professional networking tool within the agricultural community.

Views and suggestions from users are welcomed.

## **INTRODUCTION**

**T**his volume reports on the structure and growth of the Western Hemisphere's "stake" in worldwide agricultural trade, on the changing shares of the principal regional agricultural and food importing blocks in the Western Hemisphere's exports, on the seasonal "calendar" of export participation by Western Hemisphere countries in meeting the agricultural market needs of the USA and, finally, on an analysis of participation and performance of countries throughout the Hemisphere in meeting the US market needs over the past four years.

The information and analysis included in volume I of this basebook covers four aspects of agricultural trade for the Western Hemisphere.

The structure and growth of trade is covered by tables which are based on FAO data and which include period averages for 1986-90 and 1991-95, growth rates and shares of imports and exports organized in a manner which provides the reader with a "snapshot" summary of the structure and growth in trade by major agricultural component. Each component is then presented with its principal products. Each table (there is one for each country and region in the Hemisphere) is completed with a section which summarizes the performance of the twenty most important products. These tables are to be found in Sections II (Imports) and IX (Exports) of the Basebook.

Export and import shares of agricultural products (the total) are shown as percentages of the total merchandise flow for the country in question in columns (5) and (6). Shares of components of total agricultural products are shown as percentages of total agricultural products trade. Columns (7) and (8) present the export or import of each item as a percentage of the total for that same item for Latin America and the Caribbean except for Canada, the USA, the North American and Latin America and the Caribbean totals which are compared to World flows for the same item. The growth rate reported in column (9) is an annual exponential rate based on the two three year averages, 1983-95 and 1993-95. The use of these averages mean that most of the growth rates reported are good, reliable indicators of longer-term trend as the effects of one unusual year cannot bias the indicator too much.

The distribution of exports from the Western Hemisphere between the main regional "blocs", Latin America and the Caribbean (LAC), North American Free Trade Area (NAFTA), the European Union (EEC) and Asia and changes in that distribution over the past decade are covered in a second set of tables. These have been prepared for 100 products and product groups and for all of the countries and sub-regions in the Hemisphere. They are based on an agricultural trade dataset prepared by USDA-ERS.

Seasonal trade patterns are presented for trade with the United States of America. These are presented as a monthly "calendar" together with four performance indicators. It is hoped that this calendar will be an item useful to farmers and people in the trade. A subset of these measures can be accessed on IICA's Internet site @griforo which can be accessed as [agriforo.lica.ac.cr](http://agriforo.lica.ac.cr). These

data are taken from the USDA FATUS (Foreign Agricultural Trade of the US) dataset. The percentage shown for each month is an average of the value of exports for that month over the years 1994-96 as a percentage of average annual value of exports for the product and country in question for the same period. For each product the performance indicators show:

- i) the importance of exports of the product as a percentage of total agricultural exports during 1994-96 from the country in question to the USA (Column A),
- ii) the importance of exports of the product as a percentage of total exports of that product from LAC to the USA during 1994-96 (Column B),
- iii) the growth rate in exports of the product from the country in question to the USA. This is calculated as an annual exponential rate based on the two three year averages 1989-91 and 1994-96.
- iv) an index of specialization which is calculated as the ratio of the share the country in question has of exports of the particular commodity from LAC countries to the USA to the share it has of total agricultural exports from LAC to the USA.

The performance of countries and their agricultural sub-sectors in accessing the US market is the topic addressed in the final set of tables. The "Trade Performance Indicators" presented in columns (8) and (9) are measures of competitiveness as revealed by market performance. The structure and trends in trade for each country in the Hemisphere is analyzed in terms of performance achieved in product groups which were calculated from worldwide trade into the USA. There are four product groups ranging from one which shows high rates of import growth to one which contains all of the products for which worldwide imports into the US declined over the period analyzed. The base period for the analysis is the three year period beginning in July 1993 and ending June 1996. In the tables this base period is compared with the period July 1996 to June 1997.

In the tables, columns 5-7 show the share that each item has of total agricultural exports. Col (5) shows growth as a percentage of growth for total agricultural exports for the country. Col (6) and (7) show levels of exports as percentages of total agricultural exports for the same periods. The national trade performance indicator, column (8) shows the ratio of the growth in exports achieved by the commodity in question relative to the growth accomplished for total agricultural exports. A value of "0" indicates that the commodity has maintained its share of national agricultural exports, while a value of 1 would indicate that exports of a commodity grew by 100 percent more than was required to maintain the export share which the commodity had during the base period, July 1993 to June 1996. The regional indicator, column (9), presents a similar measure with respect to regional (LAC) exports of the same commodity: a value of 0 means that the country in question is maintaining its share in LAC exports of the same commodity while a 1 would indicate export growth 100 percent greater than that required to maintain its base period share of LAC exports of that commodity to the USA.

Columns (10) and (11) present the country's share of each product or group as a percentage of the LAC exports of the same group in the same period. Column (12), the specialization index, is based on the ratio of the country's share of the LAC exports of the particular commodity to the share that the country has in total agricultural exports from LAC.

For purposes of presentation the main sections of the basebook are preceded by a summary section which draws on these four sets of tables and presents some tables organized by

commodities. A few summary extracts and graphs of these tables is presented to exemplify or highlight the information contained in the body of the basebook.

The three sections of the summary contain:

- a) Tables which present the summary of Section I. Principal groups and products are shown in cross-country tables which give the reader a relative picture of the countries of the Hemisphere.
- b) The "calendar" is reworked and presented in the form of cross-country tables for principal products and some groups. Together with the Performance Indicators these calendars present a useful summary by commodity.
- c) The summary High, Medium, Low and Declining group totals calculated for every country in the Hemisphere are presented by country enabling readers to see the importance of picking commodities with good market prospects and to see the very substantial structural and performance differences between countries.

## **ACKNOWLEDGMENTS**

The elaboration of this document was coordinated by Tom Kerr.

Tom Kerr, Joaquín Arias, Rosario Bogantes, Alberto Vargas and Blanca Aranguren participated in its preparation. The work counted with the invaluable assistance of Adriana Chacón, María Eugenia Molina y M. Antonieta Barrientos. In addition it had the support of Rodrigo Jiménez y Rocío Morales.

The document is a part of an ample effort which the technical Management of IICA is carrying out under the Direction of P. Lizardo de las Casas.

**SUMMARY CONTAIN**

**MONTHLY EXPORT CALENDAR TO USA, 1994-  
1996 AND RELATIVE PERFORMANCE  
INDICATORS**

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry, no matter how small, should be recorded to ensure the integrity of the financial statements. The text also highlights the need for regular audits to detect any discrepancies or errors early on.

In the second section, the author provides a detailed breakdown of the accounting cycle. This includes steps such as identifying the accounting entity, choosing the accounting method, and recording transactions. Each step is explained with clear examples and practical advice to help readers understand the process thoroughly.

The third part of the document focuses on the classification of assets and liabilities. It discusses how to distinguish between current and long-term assets, as well as current and long-term liabilities. This classification is crucial for determining the company's financial health and its ability to meet its obligations.

Finally, the document concludes with a summary of the key points discussed. It reiterates the importance of accuracy, regular audits, and proper classification in the accounting process. The author encourages readers to apply these principles consistently to ensure the reliability of their financial reporting.

**PART Ix.**

**STRUCTURE AND GROWTH OF AGRICULTURAL  
EXPORTS. 1983-1995**

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry, no matter how small, should be recorded to ensure the integrity of the financial statements. The second part of the document provides a detailed breakdown of the company's revenue streams, including sales from various product lines and services. It also outlines the company's expenses, such as salaries, rent, and marketing costs, and explains how these are allocated across different departments. The third part of the document discusses the company's financial performance over the past year, highlighting key trends and areas for improvement. It includes a comparison of the company's performance against industry benchmarks and a forecast for the upcoming year. The final part of the document provides a summary of the company's overall financial position and offers recommendations for future growth and expansion.
